## LETTER OF TRANSMITTAL

---

Department of Public Instruction

Tallahassee, Florida, November 15, 1936.

To His Excellency,  
David Sholtz,  
Governor of Florida.

Sir :

In compliance with Section 27, Article IV, of the Constitution of Florida, I have the honor to submit herewith the Biennial Report of the Department of Public Instruction for the two years beginning July 1, 1934, and ending June 30, 1936.

Yours respectfully,

W. S. CAWTHON,  
State Superintendent of Public Instruction.

### A NEW SCHOOL CODE NEEDED

The greatest need of the public school system of Florida today is a new school code. As stated recently by Hon. Bryan Willis, State Auditor and Secretary of the School Code Committee, appointed by Governor Dave Sholtz, "It should be very apparent even from a cursory examination of the compilation of our school laws that they have gradually grown into a heterogeneous, unwieldy, and disjointed mass that can be comprehended only by those skilled in legal research. Instead of attempting to patch up this structure we should use it as the basis only to work out a code".

The new code should be simple enough to be understood by the average citizen, but sufficiently comprehensive to meet the needs of the schools for many years.

Some constitutional changes will be necessary to clear the way for the setting up of a modern State school system, and with that thought in mind the following amendments, eliminations, and new sections are suggested:

#### To Be Amended

Art. IV	Amend by striking out "Superintendent of Public Instruction" (State)
Sec. 20	
Art. VIII	Amend by striking out "Superintendent of Public Instruction" (county)
Sec. 6	
Art. XII	Amend by striking out "in proportion to the average attendance upon the schools in the said counties respectively"
Sec. 7	
(See also	
Sec. 9)	
Sec. 8	Amend by increasing the maximum county levy to twenty mills. (This to compensate for loss of revenue by abolishment of Special Tax School Districts.)

#### To Be Repealed

Art. IV	The section having reference to duties of the State Superintendent of Public Instruction.
Sec. 25	
Art. XII	
Sec. 6	The State one mill tax
Sec. 10	Authorizing school districts (provided bonded indebtedness is not impaired)
Sec. 11	Relative to school districts
Sec. 17	Relative to the issuance of bonds by special tax school districts

### New Sections

Art. XII	Add a new section providing for issuance of bonds
Const.	by counties for the exclusive use of the public
(1)	free schools in said counties. (To take place of district bonding power)
(2)	Add a new section creating an appointive State Board of Education with seven-year staggered terms for members.
(3)	Add a section stating that "The Legislature shall not pass local or special laws in any of the following enumerated cases, that is to say: **** Providing for the management of common schools. **** Granting to any corporation, association or individual any special or exclusive privilege, immunity or franchise whatever. **** In all other cases where a general law can be made applicable, no special law shall be enacted."

### Obsolete Laws That Should Be Repealed

As stated elsewhere in this report the compilation of school laws as it now exists is "a heterogeneous, unwieldy, and disjointed mass"; so there is urgent need for the repeal of many of the enactments now on the statute books.

The following obsolete laws should be repealed at once even if the suggested constitutional changes cannot be brought about immediately:

(References to section numbers are for Compiled General Laws of Florida, 1927, and also for School Laws of Florida, annotated, 1936.)

Sec.	Par.	Nature of the Law
184	8	File and preserve lists of poll tax payers
185		To inspect institutions of higher learning
494		Has reference to adoption of 1918 course of study
495		Has reference to revision and printing of 1918 course of study
511		Attendance of youth of one county of school in another
576		State board of education may purchase county interest bearing coupon warrants
579		County board of public instruction districts
584		Duties of supervisor
607-610		Course of military instruction in high schools
644		Life State certificate
664-668		Teachers' certificates issued in substitution for certificates issued in other states
680-681		Course of study committee, Acts 1903

688-699	Attendance officers (Have been declared unconstitutional—State v. Board Public Instruction of Duval County, 98 Fla. 68, 123 So. 540)
759-761 (3)	Teacher training departments in high schools
769-774	Scholarships in University and in State College
786	Board of Control authorized to provide examinations for high schools. (This power has never been exercised by the Board of Control)
809	Board created to name teachers for summer schools
812	Warrants for cost of summer schools
848	School boards required to furnish free textbooks to parents unable to purchase them
2985	City or town support of public schools for the poor, etc.

### Special Laws Enacted as General Laws

In recent years Legislatures have passed many laws, supposedly of a general nature, but having application in each case to only one or two counties. The stratagem resorted to is to make the laws apply to all counties having certain definite populations as shown by distinctly named censuses. These laws are not based upon considerations of equality and justice to all that should characterize general laws, and consequently should be repealed.

Laws of this nature found in the compilation of school laws, and that should be repealed are as follows:

1. Those having to do with compensation of Members of County Boards of Public Instruction.
2. Those having to do with compensation of County Superintendents of Public Instruction.
3. Those having to do with distribution in counties of Racing Commission funds.
4. Those having to do with other matters relating to the public schools.

### Compensation of Board Members

Chapter 5,656, Acts of 1907, sec. 1, amending a former section, provided that board members should be paid "four dollars per day for each day's service, and ten cents per mile for every mile actually traveled in going to and from the court house by the nearest practicable route," and as many as twenty-five counties are still operating under the law. However in all the other counties except Duval and Hillsborough the compensation of board members ranges from five dollars per day to as high as \$1200.00 per

year—with varying amounts of compensation for mileage. It is a fact worthy of mention that during the hard times prevailing during the years 1927-1935 compensation of board members has been increased in more than half of all the counties of Florida. In some of the counties compensation being paid board members in January, 1931, was ratified and confirmed by Chapter 15,778, Acts 1931, secs. 1 and 2.

The section numbers 527-550(30) indicate laws having to do with compensation of board members that should be repealed.

In this connection it is interesting to note that the Duval County board members serve without pay (Sec. 622(9), Ch. 16824, Acts of 1935), and that the new board to be inducted into office in Hillsborough County, January 1, 1937, will receive no salary, (Ch. 16,821, Acts of 1935).

If compensation of any kind is to be paid to school board members it should be based upon some general law and scaled in proportion to the duties involved.

#### **Compensation of County Superintendents**

Salaries of County Superintendents were in 1907 (see Ch. 5,658, Acts of 1907, sec. 1) "based upon the total annual receipts of each county, for school purposes, including special school district taxes, and excepting borrowed money," but in time this law was ignored and salaries in excess of the stipulated amounts set up in the law were paid these officials.

An attempt to legalize the salaries being paid is reflected in Chapter 15,033, Acts of 1931, secs. 1 and 2, and Chapter 16,236 Acts of 1933, secs. 1 and 2. Section 2 in both acts states that "Except as otherwise provided by law the same salaries paid during the month of January, 1931, and thereafter shall be continued to be paid each County Superintendent of Public Instruction in the State of Florida, provided, however, that no salary of such County Superintendent shall exceed the sum of Six Thousand Dollars (\$6,000.00) per year."

As early as 1923 special population basis acts setting salaries of county superintendents began to be passed, and since that time more than thirty such laws have been enacted.

Section numbers 552-558(21), and Ch. 14,655, Acts 1931; Ch. 14,666, Acts 1931; Ch. 15,607, Acts 1931, Ex. Ses.; Ch. 15,974, Acts 1933; Ch. 15,979, Acts 1933, sec. 2, indicate laws having to do with compensation of county superintendents that should be repealed. The inequality of compensation for Board Members and County Superintendents, considering the duties being performed, from county to county, is a true reflection of the haphazard method by which school laws have been passed.

There is serious need for a law setting compensation of County Superintendents upon a scale commensurate with the duties performed, and not dictated by caprice of special enactments applying to counties having given populations.

### The Racing Commission Laws

In the cases of some of the counties special laws were passed giving racing commission funds in whole or in part to the schools, but in the cases of twenty-eight counties special population basis laws relating to this matter were passed. Inasmuch as all laws of this nature are questionable in their constitutionality it is recommended that the laws described as follows be repealed:

Secs. 1 and 2,	Chapter 15,627, Acts 1931	
Sec. 1	Chapter 17,212, Acts 1935	
Secs. 1-3	Chapter 15,628, Acts 1931	(Extra Ses.)
Sec. 2	Chapter 17,187, Acts 1935	
Secs. 1 and 2,	Chapter 15,766, Acts 1931	(Extra Ses.)
Secs. 1-3	Chapter 15,769, Acts 1931	(Extra Ses.)
Sec. 1	Chapter 17,190, Acts 1935	
Sec. 1	Chapter 16,125, Acts 1933	
Secs. 1 and 2,	Chapter 17,186, Acts 1935	
Secs. 1-3	Chapter 16,131, Acts 1933	
Secs. 1-3	Chapter 16,135, Acts 1933	
Sec. 1	Chapter 16,136, Acts 1933	
Sec. 1	Chapter 16,137, Acts 1933	
Sec. 1	Chapter 16,138, Acts 1933	
Sec. 1	Chapter 16,139, Acts 1933	
Sec. 1	Chapter 16,140, Acts 1933	
Sec. 1	Chapter 17,180, Acts 1935	
Sec. 1	Chapter 17,189, Acts 1935	
Secs. 1 and 2,	Chapter 17,199, Acts 1935	
Sec. 1	Chapter 17,200, Acts 1935	
Sec. 1	Chapter 17,202, Acts 1935	
Sec. 1	Chapter 17,204, Acts 1935	
Sec. 1	Chapter 17,205, Acts 1935	
Sec. 1	Chapter 17,206, Acts 1935	
Sec. 1	Chapter 17,211, Acts 1935	

Sec. 1	Chapter 17,214, Acts 1935
Secs. 1, 2, 3,	Chapter 17,215, Acts 1935
Sec. 1	Chapter 17,184, Acts 1935
Sec. 1	Chapter 17,188, Acts 1935
Sec. 1	Chapter 17,191, Acts 1935
Sec. 1	Chapter 17,192, Acts 1935

The purposes for which racing commission funds are being apportioned through the above enumerated laws are laudable, but the needs of the schools should be met through more definite and certain enactments—through laws openly stated and capable of favorable constitutional interpretation.

### Other Population Basis Laws

The popular basis laws which follow should be abolished :

Sec. 2	Chapter 16,264, Acts 1933	
Sec. 1	Chapter 10,249, Acts 1925	
Sec. 1	Chapter 13,603, Acts 1929	
Sec. 1	Chapter 14,551, Acts 1929	(Extra Ses.)
Sec. 1	Chapter 15,900, Acts 1933	
Sec. 1	Chapter 15,935, Acts 1933	
Sec. 19	Chapter 14,678, Acts 1931	(Extra Ses.)
Sec. 1	Chapter 15,727, Acts 1931	
Secs. 1, 2	Chapter 11,966, Acts 1927	
Sec. 1	Chapter 11,967, Acts 1927	
Sec. 1	Chapter 12,082, Acts 1927	
Sec. 15	Chapter 14,678, Acts 1931	
Sec. 15	Chapter 15,934, Acts 1933	
Sec. 15	Chapter 15,936, Acts 1933	
Sec. 15	Chapter 15,938, Acts 1933	
Sec. 6	Chapter 17,041, Acts 1935	
Sec. 6	Chapter 17,051, Acts 1935	
Sec. 1	Chapter 16,914, Acts 1935	
Sec. 1	Chapter 16,915, Acts 1935	
Sec. 1	Chapter 16,916, Acts 1935	
Secs. 1, 2	Chapter 16,930, Acts 1935	
Sec. 1	Chapter 17,407, Acts 1935	
Secs. 1, 2	Chapter 17,440, Acts 1935	
Sec. 1	Chapter 16,816, Acts 1935	
Secs. 1, 3	Chapter 17,248, Acts 1935	
Sec. 1	Chapter 17,250, Acts 1935	

No doubt some of these laws have merit and should be reenacted without resort to the population basis by which their constitutionality may be brought into question.

### Miscellaneous Changes

The following laws should be revised or abolished :

1. Sec. 449(3) page 29 of School Laws 1936 (annotated) should be so amended as to allow a levy of taxes for paying back debts.

2. The Instruction Unit Law Secs. 508(1)-508(8), pp 35,39, should be rewritten to remove inoperative features.

3. Sec. 508(12), page 41, does not seem to be in line with modern school procedure and should therefore be abolished.

4. Sec. 517, page 44, should be changed to provide for a board of five members elected from the county at large, and to serve in staggered terms of five years each.

5. Sec. 517(1), pages 44-45, seems to over emphasize the importance of district responsibility of board members, and should be abolished.

6. Sec. 526, page 47, should be changed to provide no salary for school board members, but remuneration for actual time spent in attendance upon their duties as such officials.

7. Teachers Certificate laws, Secs. 630-668, pp 119-130, should be rewritten to provide for no more certificates upon examination after 1936 and the reduction of all types of certificates to a limited number of well defined permits to teach in given fields of work.

8. The compulsory attendance law, Secs. 684-699, pp 138-144, should be rewritten to make it workable.

9. All sections having to do with special tax school districts on pages 144-176 should be abolished if secs. 10, 11, and 17 of Article XII of the Constitution should be repealed.

10. Should the proposed new section of Article XII of the Constitution be adopted, sec. 754, having reference to the State Board of Education, page 176, would have to be changed to conform to that section.

11. The State textbook law, secs. 849-889, pp 213-231, should probably be simplified by being rewritten.

### **Transportation**

The consolidation of schools in Florida had its beginning about thirty-five or forty years ago, and the following tabulation of costs for transportation of pupils since 1901

gives an interesting picture of the growth of the transportation movement since that date:

TABLE I

Year Ending June 30	No. Pupils Transported	Total Annual Cost	Annual Cost Per Pupil Transported	Cost Per Pupil Per Day*
1901	Not reported	\$ 3,225.12	Not available	Not available
1902	Not reported	5,427.44	Not available	Not available
1903	Not reported	11,291.19	Not available	Not available

1916	3,163	56,262.30	16.55	.10
1917	4,338	74,934.76	17.27	.11
1918	4,261	95,158.22	22.33	.14
1919	4,440	104,118.00	23.45	.15
1920	7,966	216,689.00	27.20	.17
1921	7,681	249,685.65	32.51	.20
1922	9,360	244,542.46	26.13	.16
1923	11,924	293,284.73	24.60	.15
1924	14,822	403,939.81	27.25	.17
1925	15,927	506,411.24	29.11	.18
1926	27,678	720,045.56	25.58	.16
1927	34,298	835,275.17	24.35	.15
1928	39,529	989,358.70	25.03	.16
1929	42,326	941,534.89	22.24	.14
1930	44,161	1,031,768.48	23.36	.15
1931	54,525	1,048,582.53	19.23	.12
1932	60,758	1,093,311.08	19.64	.12
1933	64,344	926,867.60	14.40	.09
1934	63,138	977,745.67	15.49	.10
1935	66,191	1,155,826.22	17.46	.11
1936	73,040	1,604,640.01	21.97	.14

\*Based upon an estimated 160 day term for each year.

The following observations may be made from a study of this tabulation:

1. The cost of transportation for 1936 was 497.54 times as great as in 1901.
2. 21.25 times as many pupils were transported in 1936 as were transported in 1915.

3. The annual and daily cost per pupil transported were approximately two and one-half times as great in 1925 as in 1915, but by 1936 had decreased to about twice the cost in 1915.

Aside from observations made from study of the table it is an interesting fact that in 1901 the cost of transportation was less than one-half of one per cent of all current expenditures for schools. In 1915 it had increased to 1.72%; in 1925 to 5.14%; and in 1936 to 9.75%.

Again in 1901 the cost of transportation was .56 of one per cent of the total cost of instruction (teachers' salaries and other classroom expenses); in 1915 it had increased to 2.17%; in 1925 to 7.42%; and in 1936 to 13.14%.

Transportation of pupils is intimately related to the consolidation of small weak schools into larger and better ones, and without this means of reaching larger and better schools many pupils would be denied the right to an education; but mounting costs of transportation should be seriously studied, and definite steps taken to arrive at just and fair compensation for those who carry on this work.

That there have been instances in which school boards have connived with bus drivers to allow them more than adequate compensation for services rendered seems to be pretty well established.

In one such case a teacher in a given school who was being paid a salary of \$80.00 per month was allowed \$100.00 per month to transport eight pupils in a dirty, dilapidated five-passenger car.

Another case is reported of a man being paid \$40.00 per month to transport two children—and the two children were his own. In still another case a man was paid \$80.00 per month to transport five children.

In a fourth case complaint was made that a bus driver was carrying fifteen to nineteen children in a five-passenger car. This driver was accused of collecting fifty cents per pupil per month for those he transported, but the county superintendent to whom the matter was referred did not reply to the letter of inquiry directed to him about the case.

Such cases as here mentioned are rare, but they indicate abuses that must be corrected if the whole business of transporting children is to be kept on a high plane of economy and efficiency. Transportation must be retained as a necessary aid to education, but it must be kept free from motives of self seeking and petty gain on the part of those who direct its operation.

### **Teachers and Salaries**

Table II shows (a) personnel of instruction; (b) the average salaries paid Florida teachers by five year periods beginning with the year ending June 30, 1900; (c) average salaries paid for the years 1934-1936, both inclusive; (d) average national salaries paid for the years 1900 to 1934; (e) percentages that negro salaries are of white salaries paid in Florida; and (f) percentages that Florida salaries are of the national salaries for the years mentioned.

TABLE II

AVERAGE ANNUAL SALARIES OF SUPERVISORS, PRINCIPALS, AND TEACHERS, FLORIDA AND UNITED STATES, FOR YEARS SHOWN. ALSO PERCENTAGE SALARIES OF NEGRO TEACHERS ARE OF WHITE, AND FLORIDA TEACHERS ARE OF THOSE OF THE UNITED STATES.

(Data secured from Biennial Reports of the State Superintendent of Public Instruction and from Statistics of State School Systems, Office of Education, Washington, D. C.)

1936	9,421	1,039.80	2,884	494.80	12,305	912.07	Not yet available	48	Not yet available

\*The number of teachers employed was used for the years 1900-1915; the number of positions filled was used for 1920-1936. This was done to conform to the evident practice of the Office of Education, Washington, D. C.

\*\*Office of Education, Washington, D. C. reports \$806.00 for this average salary. The difference is probably due to salaries paid from Federal funds, but not reported to the State Superintendent.

The data of this table are easily understood, but the following observations may be made:

1. The average salary for white supervisors, principals, and teachers increased by more than 400% from 1900 to 1936. During the same time negro salaries increased 215%, and salaries for both races advanced 377%. During the period 1900-1934 national salaries increase 277%.
2. In 1930 salaries of white teachers reached their highest peak for all the years up to that time; but they suffered a slump in 1934. Since that time Florida salaries of whites and negroes have reached their highest point in the history of the State.
3. Negro average salaries for the entire period covered by this table have been around 50% of the average salaries for whites.
4. Florida average salaries for the period 1900-1934 have been around 61% of the national average. White salaries in Florida have averaged around 68% of the national average for the period 1900-1934.

Table III gives ranges in salaries for each of the five school years 1931-32, 1932-33, 1933-34, 1934-35, and 1935-36, for white teachers, for negro teachers, and for both races.

\*Data for salary range by positions not available.

\*\*The Superintendent of Collier County teaches, but is not included in the above schedule.

It will be noted that for the years 1931-32 and 1932-33 the table has only twelve steps in the ranges of salaries for those years, whereas for the remaining three years there are nineteen steps each. Those steps in the various ranges having the greatest numbers of salaries falling within their limits are "boxed in" to call special attention them.

Each section of this table is easily understood, but the following observations may be made:

1. The peak of the distribution for salaries of white teachers tends to fall near the middle step; whereas, that for negroes falls at about one-fourth the distance from the lowest to the highest.
2. In the distributions for negro teachers there is a tendency to have two peaks separated by one or more steps.
3. There are entirely too many teachers with salaries in the lower steps of all the ranges. This is noticeably true in

the cases of the salaries of negroes. In 1935-36 there were 2,715 white teachers, or twenty-nine per cent of all, who received a salary of less than \$800.00. For the same year 2,775 negro teachers, or ninety-six per cent of all negro teachers, received less than \$800.00.

There is urgent need for a teachers' salary schedule that will base salaries paid upon proper training and successful experience.

## TEACHERS PENSIONS

### **REPEAL OF THE TEACHERS' PENSION ACT PROPOSED**

The Act of the Legislature of 1931, providing for a monthly allowance in the form of a Pension to School Teachers should be repealed, the repeal not affecting the status of those already pensioned.

The law is decidedly at variance with teachers' pension laws in force elsewhere, in that it does not make provision for the creation of a fund to which teachers contribute. As a consequence, the entire financial burden must be carried by the General Revenue Fund.

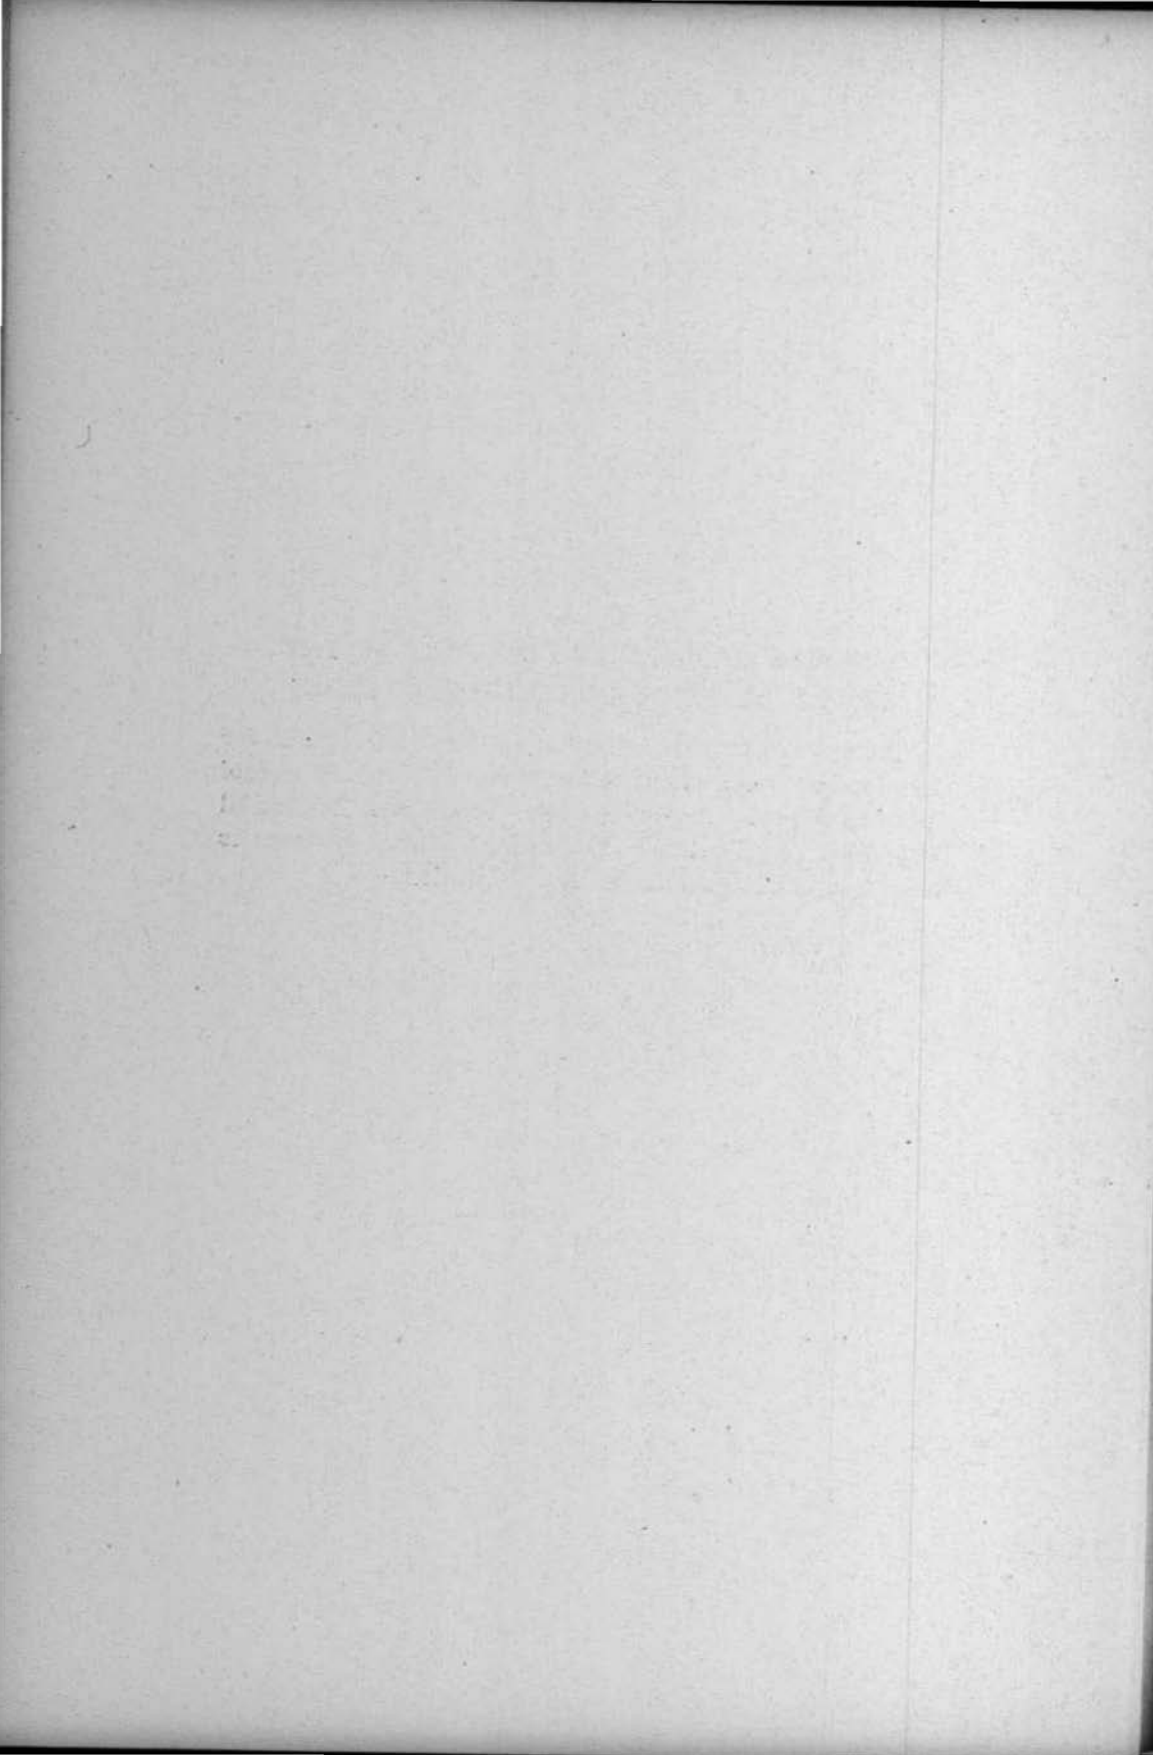

In the second place, there is no relationship between the amount of the allowance and that earned by the teacher annually or monthly at the time of retirement. A large number of pensioners are drawing several times as much money per year as they ever earned while active.

Thirdly, the requirement that one must be unable to carry on his or her vocation and must be without other means of support in order to be eligible for a pension prevents some of those who are worthy of a pension from making application for the same.

The provisions now being perfected for the economic security of the aged and dependent should replace those of the teachers' pension act, since there does not appear to exist a need for both sets of provisions.

## **REPORTS OF VARIOUS DIVISIONS OF THE DEPARTMENT OF PUBLIC INSTRUCTION**

Chapters II-IX both inclusive, contain the reports for the biennium on: Instruction, School Finance, School Building Service, Negro Schools, Trade and Industrial Education, Agricultural Education, Home Economics Education, and Vocational Rehabilitation.

## CHAPTER II

---

### INSTRUCTION

It has been deemed advisable to change the character of this chapter of the Biennial Report of the State Superintendent for the biennium 1934-36. Formerly, many pages of tabulated statistical information for high schools applying for accredited standing were included. It was found, however, that much of this information was a duplication of statistical information included in the tables of general statistics found elsewhere in the State Superintendent's Biennial Report, and furthermore, that misinterpretation was often made of such statistics since they were not complete—excluding high schools not asking for accredited relations.

These statistics have been omitted and the time usually devoted to their assembly was devoted to some comparative studies which will indicate trends, progress, etc. It is hoped that this new type of report will be of more service to education than the one formerly presented.

#### **Brief Summary of Activities of State Director of Instruction for Biennium 1934-1936**

1. Spent approximately 375 days in the office, and 280 days in the field.
2. Attended 34 educational meetings in the State of Florida and 9 out-of-state meetings. Most of the latter were committee meetings of the Southern Association and expenses of such trips were paid by that organization.
3. Made 42 educational addresses.
4. Made 536 school inspections.
5. Made approximately 50 calls on county superinten-

dents at times other than when inspecting their schools.

6. Served on the following committees:
  - a. Consultant to Education Committee of the State Planning Board
  - b. Chairman, Testing and Guidance Program of Florida Association of Colleges
  - c. State Chairman, 300th Anniversary Celebration of American High Schools
  - d. Teacher Training Committee, Florida Association of Colleges
  - e. State-wide Teacher Placement Service
  - f. Committees of the Southern Association of Colleges and Secondary Schools:
    - (1) State Accrediting
    - (2) Chairman, Secondary Commission, 1934
    - (3) Chairman, Program Committee
    - (4) Chairman, Standing Committee on Standards
    - (5) Revision of Constitution
    - (6) Committee on Junior High Schools
    - (7) Committee on Extra-Territorial Schools
    - (8) Committee on Nominations
    - (9) Joint Committee on Study of Curricula
  - g. State Advisory Committee of the National Youth Administration
  - h. Committee to plan placement of, and course of study for, courses in Conservation of Natural Resources to be taught in high schools.
  - i. Advisory Committee, Florida School Code Committee
7. Prepared and printed, or mimeographed, or assisted in the preparation of, the following bulletins:

- a. Certificate Requirements for Teachers in State Accredited Schools
  - b. Two Educational Directories
  - c. Mailing list of principals and superintendents
  - d. Standards for accrediting high schools and elementary schools
  - e. Revision of Elementary Course of Study
  - f. Editing and printing high school courses of study in English, Social Studies, Commerce, Foreign Languages and Home Economics.
8. Some miscellaneous activities:
- a. Revised elementary standardization blank
  - b. Attended National Convention American Legion in Miami
  - c. Attended several conferences on building programs for schools of the State
  - d. Attended National Congress of Parents and Teachers in Miami
  - e. Taught class in Short Course for County Superintendents University of Florida.

#### **Growth in High School Enrollment**

Much has been said in recent years about the increasing cost of operating public schools. These figures would not seem nearly so appalling to the taxpayer if he could visualize along with this increasing cost the increasing enrollment in our public schools and especially the tremendous increase in high school enrollment—that phase of public school education which is most expensive. The little table below gives enrollments in grades 9-12 by five-year periods from 1909-10 (the first year that figures are available for high school enrollment) to 1934-35.

**TABLE I**

#### **Enrollment In Grades 9-12 In Florida High Schools**

1909- 1910	1914- 1915	1919- 1920	1924- 1925	1929- 1930	1934- 1935
3,046	5,149	12,195	25,708	48,592	60,824

It is interesting to note that the high school enrollment in these grades just about doubled for every five years between 1910 and 1930. The increase in these last five years was only about 25%. The total gain between 1909-1910 and 1935-1936 is 57,781, or 1898.8%. This tremendous increase accounts to a large extent for the increased cost of public schools; and will probably continue for a decade or two at least. In 1880, statistics of the United States Office of Education showed only 3% of the pupils of high school age were enrolled in high schools of the United States. It is estimated that over 60% of the high school population is now enrolled in high schools.

The increase of enrollment in secondary schools is also significant from other angles than that of cost. The present high school rolls are more cosmopolitan than formerly was the case. The pupils no longer come just from the homes of the cultured few, and from those in the upper economic strata of society.

The children of the so-called common people are in our high schools in large numbers. Pupils are no longer only from the group who will go to college and enter the learned professions of Law, Medicine, Teaching, Engineering, The Ministry, etc. Many of them will go into the trades, selling, the ranks of the laborer, and other lowlier pursuits. This has its implications for the curriculum. Shall we have widely diversified curricula in our secondary schools or shall there be a rather general curriculum calculated to prepare for intelligent living in society, making no material difference for those students who will go from high school to college or to trade school or directly into the various pursuits of life? The solution of this problem is one of the greatest challenges to the student of education in these United States of America. No satisfactory solution has yet been put into operation.

TABLE II  
TRAINING OF HIGH SCHOOL TEACHERS AND PRINCIPALS IN FLORIDA

1929-1930 and 1935-1936

(Including White and Negro Schools, Public and Private, Accredited and Non-Accredited.)

Amount of Training	No. of High School Teachers		Per Cent of Teachers in Each Class		No. of High School Principals		Per Cent of Principals in Each Class	
	1929-30	1935-36	1929-30	1935-36	1929-30	1935-36	1929-30	1935-36
Less than High School graduation .....	15	1	.6	.03	5		1.8	
4 Years' High School and less than 1 year College .....	108	38	4.2	1.1	7	2	2.5	.7
1 Year's College and less than 2 years ..	82	55	3.2	1.6	11	7	4.0	2.3
2 Years' College and less than 3 years ..	369	251	14.3	7.3	17	11	6.1	3.6
3 Years' College and less than 4 years ..	128	268	5.0	7.8	9	9	3.2	3.0
4 Years' College and less than 5 years ..	1,636	2,119	63.4	62.0	161	135	58.1	44.4
5 Years' College and less than 6 years ..	179	473	6.9	13.8	47	88	17.0	29.0
6 Years' College and less than 7 years ..	46	137	1.8	4.0	13	32	4.7	10.5
7 Years' College or more .....	19	76	.7	2.2	7	20	2.5	6.6
Totals .....	2,582	3,418	100.1	99.83	277	304	99.9	100.1

Table II (page 65) gives the number of Florida high school teachers and principals with varying amounts of educational training or schooling, from those that have less schooling than that indicated by graduation from high school to that indicated by 7 years college or more, and the per cent with any given amount of schooling for the six-year period from 1929-30 to 1935-36. This tabulation includes data from all high schools, of all types and both races, that apply for accreditation. This includes practically all the public high schools of the state, but very few private high schools.

Attention is called to the fact that the amount of training assigned to any given teacher is that claimed on the application blank used by high schools requesting accreditation by the State Board of Education, and not from college and high school transcripts. It may be pointed out that teachers will tend to set their training higher than it actually is. This may be true to some extent, but, at least for purposes of comparison between 1929-1930 and 1935-1936, there would seem to be no reason to assume that they would have exaggerated more in one year than in another.

The number of teachers in each class is not significant, but the per cents are significant. It is interesting to note that in the lower brackets for both teachers and principals there has been a consistent and significant decrease in the per cents, while in the upper brackets just the opposite is true. This indicates there is an increasing demand for better educated teachers and principals in Florida high schools, as well as an increasing supply.

Some of the interesting facts that can be gleaned from the table, with reference to principals, are: (1) There were in 1935-36 no high school principals claiming less schooling than 4 years of high school; (2) in 1929-30, 4.3% of the high school principals claimed less than 2

years' college, while in 1935-36 this per cent had dropped to .7; (3) in 1929-30, 91.6 per cent of the principals had two years or more of college, while in 1935-36 there were 97.0 per cent in this group; (4) the increase in the per cent of high school principals claiming college graduation in this same period was from 82.3 to 90.4; while the per cent having 5 years' college or more went from 24.2 to 46.0. This tendency of principals to take work beyond the bachelor's degree is the most marked trend shown by the data.

A like analysis of the data for high school teachers is also interesting and shows decided improvement in the educational status of these teachers: (1) the number who profess less than high school graduation is negligible for both years though improvement is indicated; (2) in 1935-36, 99.97 per cent of all these teachers were high school graduates or had been admitted to college on some other basis; (3) those claiming 2 years' college or more had increased from 92.1 to 97.1 per cent; (4) those claiming 4 years' college or more had increased from 72.8 to 82.0 per cent; (5) the per cent of high school teachers who report 5 years or more of college training more than doubled in the same period—rising from 9.4 to 20.

No attempt is made to show the cause for the decided improvement indicated by this comparison. It is, no doubt, due to a number of causes, among which are: Competition for teaching jobs caused by the economic depression; state standards for accrediting schools; and the introduction in many local systems of salary schedules. It would appear that the time is at hand when legislation should be enacted to place all teachers' licenses on the basis of educational training, and, if the examination system is maintained at all, to put an educational prerequisite of at least two years' college for entrance to

an examination for any type of certificate which would permit a person to draw pay for teaching in a public high school.

### Experience of Florida Senior High School Teachers

How long do high school teachers follow the vocation of teaching? Do they make teaching a life work or do they use it as a stepping stone for some other vocation? Is there any tendency toward a longer period devoted to teaching? Although the data given here cannot answer these questions conclusively, they certainly will give at least a partial answer.

TABLE III  
TOTAL TEACHING EXPERIENCE OF FLORIDA SENIOR  
HIGH SCHOOL TEACHERS IN 1935-36

Years of Experience	†Small High School		*Large High School	
	No. of Teachers	Per Cent in each Interval	No. of Teachers	Per Cent in each Interval
1 .....	112	12.9	65	4.6
2 .....	97	11.1	87	6.2
3 .....	75	8.6	101	7.2
4 .....	60	6.9	77	5.5
5 .....	66	7.6	97	7.0
6 .....	71	8.1	75	5.4
7 .....	60	6.9	88	6.3
8 .....	49	5.6	67	4.8
9 .....	37	4.2	78	5.6
10 .....	28	3.2	75	5.4
11-15 .....	112	12.9	271	19.0
16-20 .....	40	4.6	149	10.7
21 and over .....	60	6.9	155	11.1
Total .....	867	99.5	1,384	98.8
Median .....	5.3		8.5	
25 Percentile .....	2.1		4.2	
75 Percentile .....	9.8		14.2	

†Small High School includes:

All 6-Year Junior-Senior High Schools with 11 teachers or less.

All 4-Year Senior High Schools with 7 teachers or less.

\*Large High School includes:

All 6-Year Junior-Senior High Schools with 12 teachers or more.

All 4-Year Senior High Schools with 8 teachers or more.

All 3-Year Senior High Schools.

On page 72 of the Biennial Report of the State Superintendent of Public Instruction for 1932, the writer pre-

sented similar data to that contained in Table III, which will by comparison indicate whether the tendency is toward a longer or shorter period spent by Florida high school teachers in the vocation of high school teaching. In tabulating the data for 1931-32 and for 1935-36, the current year's experience is counted in each case. The data has been arranged for large and small high schools separately. Table III is read as follows: 112, or 12.9%, of the teachers in the small high schools of Florida are beginning teachers, teaching their first year; while only 65, or 4.6%, of the teachers in large high schools of Florida are beginning teachers. Likewise, 28, or 3.2%, of the teachers in the small high schools of Florida are teaching their tenth year; while 75, or 5.4%, of the teachers in the large high schools of Florida are teaching their tenth year.

It is interesting to note that the median year of teaching of Florida high school teachers in 1935-36 is 5.3 years in the small high schools and 8.5 years in the large high schools. Likewise, it is seen that the 25-percentile and the 75-percentile are larger for large high schools than for small high schools, indicating that teachers on the average leave the vocation of teaching in small high schools much earlier than in the large high schools.

Fifty per cent of the teachers in the small high schools have had less than six years experience; and fifty per cent of the teachers in the large high schools have had less than nine years experience.

By totaling the per cents to any point in the scale, the per cent of teachers with any given amount of experience can be determined. For example, only 24.4% of the teachers in small Florida high schools had had ten years or more experience as teachers in 1935-36. This means, of course, that 75.6% of them had had less than ten years of experience. In the large high school, 40.8%

of the teachers had had ten years or more experience as teachers and 59.2% had had less than ten years of experience as teachers. This indicates that the large high schools are able to command the services of the more experienced teachers. It will be observed from examining other tables in this study that the teachers in the larger high schools are better trained and have more secure tenure. This is probably due to several factors. The larger high schools are, on the whole, in the centers of population and wealth, and pay better salaries. Most teachers seem to prefer living in the larger centers because of better boarding conditions, better social, recreational, and amusement advantages and the fact that local politics do not play so large a part in securing teaching positions as in the smaller communities. The larger centers offer better supervisory advantages also, and are more apt to have salary schedules that reward experience. There is a further item of personal freedom. In the smaller communities everybody knows so much about the personal affairs of every one else and are so critical of a teacher's social habits as to almost rob her of any sense of independence or social freedom.

Below is given the median and two quartiles of the experience of Florida senior high school teachers for the years 1931-32 and 1935-36:

Large High Schools		
	1931-32	1935-36
Median .....	7.5	8.5
25 Percentile .....	3.6	4.2
75 Percentile .....	10.5	14.2
Small High Schools		
	1931-32	1935-36
Median .....	5.4	5.3
25 Percentile .....	2.4	2.1
75 Percentile .....	10.1	9.8

It will be noted that the median and quartiles for 1935-36 in the large high schools are appreciably higher than for 1931-32, while for the small high schools these quotients are smaller in the latter year though there is not as much difference as in the case of the large high schools. This indicates that teaching in the large high schools is becoming increasingly more attractive in comparison with teaching in the small high schools; that whatever the factors were that operated to the advantage of the larger high schools and the disadvantage of the smaller high schools in 1931-32, are still in operation, and are affecting the situation more at present than they did five years ago. If experience makes for a better teacher, it would behoove those interested in the smaller high schools to find the causes of the differentiation and make an effort to remove them.

#### **Tenure of Florida Senior High School Teachers**

During the past few years there has been a good bit of discussion in teachers' organizations about teacher-tenure. The writer thought it fitting, therefore, to make a tabulation on tenure of high school teachers identical with that presented in the Biennial Report of the State Superintendent of Public Instruction for 1932, in order to determine what was the status of high school teacher-tenure for the school year 1935-36 as compared with that of the year 1931-32. (See page 73 of the above-mentioned Biennial Report for the tabulation for 1931-32.)

TABLE IV  
TENURE OF FLORIDA SENIOR HIGH SCHOOL TEACHERS  
IN 1935-36

Years in Present Position	†Small High School		*Large High School	
	No. of Teachers	Per Cent in each Interval	No. of Teachers	Per Cent in each Interval
1 .....	300	34.6	261	18.8
2 .....	181	20.8	214	15.4
3 .....	90	10.4	141	10.1
4 .....	56	6.5	78	5.6
5 .....	41	4.7	100	7.2
6 .....	54	6.3	113	8.1
7 .....	39	4.5	97	7.0
8 .....	25	2.9	78	5.6
9 .....	14	1.6	87	6.2
10 .....	10	1.1	55	3.9
11-15 .....	42	4.8	120	8.6
16-20 .....	8	.9	22	1.5
21 and over .....	7	.8	18	1.3
Total .....	867	99.9	1,384	99.3
Median .....	1.7		3.97	
25 Percentile .....	.7		1.4	
75 Percentile .....	4.6		7.4	

†Small High School includes:

All 6-Year Junior-Senior High Schools with 11 teachers or less.

All 4-Year Senior High Schools with 7 teachers or less.

\*Large High School includes:

All 6-Year Junior-Senior High Schools with 12 teachers and over.

All 4-Year Senior High Schools with 8 teachers and over.

All 3-Year Senior High Schools.

In **tenure** as in **experience** the current year's tenure was counted in every case in making the tabulation. As was the case in 1931-32, the most significant thing indicated in Table IV is the large turnover in both the large and small high schools, and especially in the latter. It is rather startling to note that 34.6% of the teachers in small high schools and 18.8% of the teachers in the large

high schools are teaching the first year in their present positions. The per cents five years ago, however, were 36.1 and 19.2 for the two groups respectively, so there is indication of slight improvement though very little in the larger high schools. The medians indicate that in the small high schools 50% of the teachers have been in their present positions less than two years, and that in the large high schools the same per cent have been in their present positions a little short of four years. The median tenure in the small high school is exactly what it was in 1931-32 but it is one year higher in the large high school. For purposes of comparison, the medians and 25- and 75- percentiles are given below for both years.

#### Large High Schools

	1931-32	1935-36
Median .....	2.8	3.97
25 Percentile .....	1.3	1.4
75 Percentile .....	4.9	7.4

#### Small High Schools

	1931-32	1935-36
Median .....	1.7	1.7
25 Percentile .....	.7	.7
75 Percentile .....	3.5	4.6

These quotients indicate some improvement in the large high schools, but none in the small high schools save for the fact indicated by the 75-percentile that a few teachers remain in their position longer now than in 1931-32, but the average teacher moves just as quickly as in 1931-32.

A teacher should become more and more valuable to a community the longer she remains in that community. These figures seem to indicate, however, that those en-

trusted with the employment of teachers in Florida do not accept this premise. The three main reasons generally accepted for a teacher changing positions are: (1) that the idea of patronage held by local trustees and county boards of public instruction tend to replace teachers with other teachers who are political supporters, friends, or kinsfolk of a newly elected trustee or county board member, or even a county superintendent; (2) that some teachers are such poor instructors, or diplomats, or what-not, that they, of necessity, move from year to year; and (3) that teachers change in order to secure better pay or in the hope of a more congenial environment. There are other reasons, of course, but these three probably account for a large majority of the changes. There is one other factor that affects turnover to a considerable degree in determining any measure of central tendency, such as the median and percentiles used in this study; namely, the large number of teachers who drop out of the vocation of teaching and must be replaced by new teachers. It should be noted, for example, that of the 300 teachers in the small high schools who are teaching their first year in their present positions, 112 were beginning teachers (see Table III) and could not have taught a year in their present positions.

If longer tenure is desirable, it behooves those concerned in Florida to study the causes for short tenure, whether they be politics, inefficiency on the part of teachers, poor economic conditions, or all three, and perform whatever surgery is necessary to remove such cause, or causes.

TABLE V  
SEMESTER HOURS' COLLEGE TRAINING IN SUBJECTS TAUGHT IN SENIOR HIGH SCHOOLS IN FLORIDA IN 1935-36

Median 1931-32	37	6.6	15.8		7.5	21.4	4.1	22.5	22.0	14.0	33.8	19.5	15.2	22.5	34.5	7.5	10.5	9.5	4.1	16.3	16.7

Under Commercial Subjects all credits earned in that field have been counted even if only one subject in that field is being taught.

The column under "Civics" includes political science as well as civics. Credit in political science only has been used for this column.

General Science includes biology, physics, chemistry, botany, zoology.

Journalism and public speaking will fall under "English" column.

### **Specific Training for Subjects Taught by Florida Senior High School Teachers**

This is another attempt to determine, through comparison with data for 1931-32, to show what is the trend of certain factors affecting instruction in Florida high schools. The data were taken as in 1932 (see page 79 of the State Superintendent's Biennial Report for 1932) from college transcripts of Florida high school teachers. Not all teachers are included, but every effort was made to get a fair random sampling. The medians for all subjects are, of course, not absolutely accurate as too few teachers were included in sampling; yet it will be noted that certain subject teachers are highly specialized in both 1931-32 and 1935-36, and certain others have little specific training in the subjects taught.

Table V is self-explanatory. The tabulation for 1931-32 is not given in this report, but the medians are given so that comparisons may be easily made. It will be noted that the median number of semester hours for the total group that teachers had had in the subjects taught increased, in the five year period from 1931-32 to 1935-36, from 16.7 to 22.1. Most of the subject fields show some increase in the number of semester hours that the teachers have had in 1935-36 over that in 1931-32, though a few show a slight decrease.

While scholarship in the field taught is desirable, there is danger that teachers will be too narrowly trained. Every teacher, for example, should have the ability to speak correct English and should be cognizant with the social, economic and political problems of his community, state, and country, and know something of the historic bases of these problems. Many of our teachers lack this basic training. Their specialization began too early. There should be a broad cultural background, plus specialization, if our schools are to have the best type of teacher.

The movement toward the General College should help, especially if standards can be raised in the direction of college graduation for all teachers.

TABLE VI

PER CENT OF STUDENTS ENROLLED IN THE SEVERAL  
HIGH SCHOOL FIELDS OF STUDY FOR THE  
SCHOOL YEARS 1925-26 AND 1935-36

### Trends in Subject Enrollments and Subject Offerings in Florida Senior High Schools

Table VI is an effort to show the trends over a ten-year interval in Florida senior high school grades in subject fields pursued by pupils in these schools. In order to make these figures comparable only those subjects offered in grades 9-12 were included. The ninth grade in junior high schools was not included. The per cent enrolled in any subject field for a given year was determined by dividing the total number of pupils in grades 9-12 in Florida senior high schools enrolled in a given subject field by the total enrollment in grades 9-12 of those schools.

The table may be read as follows:

In 1925-26, the enrollments in vocational agriculture were 2.86% of the total number of pupils enrolled in grades 9-12 of Florida senior high schools; in 1935-36, this same per cent was 3.21; there was a slight gain indicated by the +.35 difference in the per cents for 1925-26 and 1935-36.

It will be noted that nine of the sixteen subject groups represented showed an increase in relative enrollment, and seven showed a decrease. There was no very significant trend in agriculture, art, home economics, French, German, Spanish, manual arts, music, physical and health education, and science.

The most significant trend is the relative increase in commerce enrollments. For some reason there has been a marked increase in the demand for commercial subjects. This is probably due to several causes: (1) The hope of getting something more "practical" that will help one to earn a livelihood; (2) a search for something easier for the student of mediocre ability; (3) pressure from salesmen of typewriters, textbooks, and other materials used in commercial departments. The first of these suggested reasons comes from parents, pupils and school administrators themselves. There are, of course, general educational values in the commercial courses, but few teachers of these courses or principals of schools are employing commercial courses with the idea of realizing general educational objectives. The vocational objective predominates in spite of evidence to the effect that vocational schools, private commercial schools, and colleges are training many more people in the commercial field than there are available openings for them in the commercial world.

There has been a decided decrease in the relative enrollments in foreign languages as a whole. German has

disappeared. French has shown some decline; Latin a decided decline; while Spanish has shown a slight increase.

Mathematics showed the most marked decline of any of the subject fields. Although there was a decline in solid geometry and trigonometry, the largest decline came in algebra and plane geometry. Unfortunately, we are unable to tell from the data whether the relative decline was in first or second year algebra due to the fact that many of the 1925-26 reports did not make this distinction. The decline in social studies is probably explained by the fact that many of our high schools in 1925-26 required three to four units of history.

The enrollments of over 100% in English are accounted for by the fact that all students are required to take four units of English and a number of them also enroll in such subjects as dramatics, journalism, and public speaking.

### **TRENDS IN SUBJECT ENROLLMENTS**

Table VI gave the trends in the subject groups or fields for the ten year period from 1925-26 to 1935-36. Table VII gives in much greater detail the subject enrollments and the per cent that these subject enrollments are of the total number of pupils enrolled for the same two school years. The per cents were secured by dividing the total enrollments in any given subject for the given year by the total number of pupils enrolled in grades 9-12 in the senior high schools for that year. These per cents give the relative increase or decrease. In some instances, there was an actual increase in enrollments but a decrease in the percentage of enrollment. Latin I, II, III, and IV are examples of this.

Some subjects are broken down by years, as English I, II, III, and IV; others are not because it was not pos-

sible to determine from some of the reports whether the enrollments were in the first, or some other year.

The trends in mathematics, foreign languages, and commercial subjects are especially significant. All the mathematics courses show a relative decrease in enrollments save **general mathematics**, **arithmetic**, and **pre-college mathematics**, all of which are new in the curriculum. Only one school reported the **pre-college mathematics**. Only one foreign language, **Spanish**, showed a relative increase. **Commerce** showed a large relative increase and more than doubled the number of branches offered in this field.

The social studies show interesting trends. The actual enrollments in **ancient history** and **modern history** have declined, while **world history** is decidedly increasing. This shows a trend away from the two-year course in **world history** to a one-year course. **English history** is definitely on the way out. **Problems of American Democracy** is on the increase and in all probability would have increased much more rapidly, but for the ruling of the State Board of Education in July, 1933, that State funds could not be used to pay teachers of this subject. **It is recommended that this ban be removed**, since there appears to be no sound basis for such a ruling.

### THE PROBLEM OF SMALL CLASSES

In July of 1933 the State Board of Education, pursuant to powers given them by the school law of that year passed a regulation to the effect that teachers of high school classes below a certain minimum in schools with given enrollments could not be paid from state funds. Although no machinery was set up by the Board for the enforcement of this regulation, it did have a rather wholesome effect in calling to the attention of school administrators the high per-pupil cost of small classes.

It has been difficult, however, to altogether avoid classes too small to justify under the principle: "It is not right or democratic to spend the money of all the people on the education of the children of a few of the people". One of the problems faced by the administrative authorities, especially in the small high school, is, what to do in case of pupils who are preparing to enter, let us say, an engineering college, and wish to take trigonometry. There will quite often be only one or two in such a case who will register for this course. The same is true of third and fourth year Latin classes, or sometimes physics, or the second year of a modern foreign language.

One suggested solution is supervised correspondence work through the Extension Division of the University of Florida. This would probably be a happy solution, since the school would not be put to the expense of providing a teacher. It would be responsible only for providing a place for study and for conducting the examinations set by the Extension Division.

In order to get some idea of how serious the small class problem is, a tabulation was made from the daily schedules of classes given in the principals' applications to the State Department of Public Instruction for accreditation of their schools in 1934-35. This tabulation is presented as Table VIII.

This table is a little complicated and will need interpretation. The first column at the left gives intervals of enrollment of high schools for which the minimum class size (given in the second column from the left) was set by the State Board of Education Regulation of July, 1933. The columns headed from 1-17 give the number of classes of any given enrollment, in schools within any enrollment interval (as 25-49) that fall below the minimum set by the State Board for schools falling

within any given enrollment intervals. The "Total" column at the right gives the number of classes for schools of given enrollment intervals that fall below the minimum set by State Board regulation. The "Total Number Classes" row at the bottom gives the total number of classes below minimum of each given class size from 1 to 17. The "Total Number Pupils Involved" row gives the total number of pupils enrolled in all high schools in classes below the minimum set by the State Board of Education. There was a grand total of 2100 of these.

These figures would indicate that there is a fertile field for supervised correspondence work in Florida high schools. This is especially true when the probability is taken into consideration that there would have been many more such small classes, but for the aforementioned regulation of the State Board of Education. This is more than a probability for the writer knows of a number of schools which did not accede to the demand for certain subjects where few students registered for such subjects.

TABLE VIII  
DISTRIBUTION OF SMALL CLASSES IN FLORIDA SENIOR HIGH SCHOOLS IN 1934-35

ENROLLMENT GRADES 9-12	Class Minimum Allowed	CLASS ENROLLMENT BELOW MINIMUM ALLOWED																	Total Classes

### **The Educational Qualifications of Teachers in the White Elementary Schools of Florida**

Tables IX and X give the training in terms of education or schooling of teachers in the white elementary schools of Florida for the school years 1930-31 and 1935-36. It was possible to secure data for no longer interval since the necessary information was not secured for elementary teachers prior to 1930-31. Even this short interval, however, indicates decided improvement. The data were secured from the application blanks employed by elementary schools in applying to the State Department of Public Instruction for accredited standing. Attention is called to the fact, therefore, that there are some 2,000 teachers in Florida elementary schools not included in these tabulations and that teachers in schools not asking for accredited standing in all probability do not have as much schooling as the teachers in schools applying.

The tables are self-explanatory. Attention is called to the fact that there has been a decrease in the percentage of teachers in the lower brackets and an increase in the percentage in the upper brackets. Other interesting trends may be gleaned from these tables. On the whole, teachers are better educated in the larger schools but not as much so as would be expected in view of the differences discovered between the education of teachers in large and small high schools.

By summing up the per cents below two years' college training, it will be seen that in 1930-31, 37.6% of these teachers had less than two years of college; while in 1935-36, 22.99 per cent had less than two years of college—a decrease in this lower group of 14.68%. On the other hand, the per cent with two or more years' college increase from 62.33% to 77.01%—an increase of 14.68% of the total in this group. In 1930-31, only

TOTAL .....	2,477	977	779	125	4,358	100.00

\*Principal not counted if he did no teaching in the elementary grades.

16.19% of these teachers had schooling of four years of college or better, while in 1935-36, 24.76% of them had four years or more of college. In the same period the teachers admitting of less than a high school education decreased from 5.19% to 1.81%.

While these figures indicate an appreciable rise in the educational status of Florida elementary school teachers, they are still far short of a minimum ideal of at least two years of college work. The universal adoption of a single salary schedule that would guarantee an elementary school teacher the same pay as a high school teacher for the same amount of training and experience would do much to improve the qualifications of teachers in elementary schools. Such a schedule is **strongly recommended by the writer**. It should be pointed out that a number of Florida counties now have single salary schedules in operation. This, in all probability, accounts to some extent for the increased amount of training for Florida elementary school teachers.

With 77% of the teachers in these schools having two years or more of college training, it would seem that there would be enough available teachers with college training to warrant the enactment of legislation enabling the State Department of Public Instruction to stop the issuance of any type of teacher's certificate that does not have an educational prerequisite. At present, First, Second and Third Grade certificates have no educational prerequisite. The same is true of Professional certificates.

### RECOMMENDATIONS

1. In view of the high percentage of trained teachers in our public schools, as indicated in this report, (Tables II, IX and X), and in other studies of available certificated teachers, it is recommended that legislation be enacted to stop the issuance of any type of certificate that does not require an educational background of at least high school graduation. In the opinion of the writer, the issuing of Third Grade, Second Grade, Primary, and Professional certificates should be discontinued at the 1937 term of the Legislature, and no one should be permitted to enter the examination for a First Grade certificate who has not graduated from a senior high school, or in lieu thereof, has satisfied college entrance requirements and completed 30 semester hours' college work.
2. A certificate for senior high school principals, based on a minimum of four years' college training with specific professional training requirements would seem desirable.
3. The whole question of certificate requirements for teaching high school subjects should be carefully studied, as there are still points of difficulty. This applies especially to the subjects of the junior high field—geography causing the most difficulty at present.
4. It is recommended that the State Board of Education rescind its regulation of 1933 to the effect that teachers of art, physical and health education, problems of American democracy, and certain courses in French and Spanish cannot be paid from state funds.
5. It is recommended that some plan for supervised correspondence work for high school students be set up through the Extension Division of the University of Florida.

## ACCREDITED HIGH SCHOOLS

FOR THE YEAR 1934-35

Explanation.—There are five types of Standard High Schools under the present system of classification: (1) Four-Year Senior (4-Yr. Sr.), grades 9-12; (2) Three-Year Senior (3-Yr. Sr.), grades 10-12; (3) Six-Year Junior-Senior (6-Yr. Jr.-Sr.), grades 7-12; (4) Three-Year A or B-Junior (3-Yr. A-Jr.), or (3-Yr. B-Jr.), grades 7-9; (5) Four-Year B-Junior (4-Yr. B-Jr.), grades 7-10. Those Junior High Schools maintained in communities where there is no Senior High School are designated as Three-Year B-Junior High Schools or Four-Year B-Junior High Schools, as the case may be. Those Junior High Schools maintained in communities where there are one or more Senior High Schools are designated as Three-Year A-Junior High Schools.

# ACCREDITED ELEMENTARY SCHOOLS

FOR THE YEAR 1934-35

Group I—A school of ten or more teachers.

Group II—A school of six to nine teachers.

Group III—A school of three to six teachers.

Group IV—A school of one or two teachers.

A Limited Standard School meets all required points and at least 25% of the flexible points, but the building need not measure up to all modern specifications.

A Regulation Standard School meets all required points and 25% of the flexible points.

A Superior Standard School meets all required points and 75% of the flexible points.

(For requirements for standardization see Standards for Florida Elementary Schools, published by the State Department of Public Instruction, July 1, 1931.)

# ACCREDITED HIGH SCHOOLS

FOR THE YEAR 1935-36

**Explanation.**—There are five types of Standard High Schools under the present system of classification: (1) Four-Year Senior (4-Yr. Sr.), grades 9-12; (2) Three-Year Senior (3-Yr. Sr.), grades 10-12; (3) Six-year Junior-Senior (6-Yr. Jr.-Sr.) grades 7-12; (4) Three-Year A or B-Junior (3-Yr. A-Jr.), or (3-Yr. B-Jr.), grades 7-9; (5) Four-Year B-Junior (4-Yr. B-Jr.), grades 7-10. Those Junior High Schools maintained in communities where there is no Senior High School are designated as Three-Year B-Junior High Schools or Four-Year B-Junior High Schools, as the case may be. Those Junior High Schools maintained in communities where there are one or more Senior High Schools are designated as Three-Year A-Junior High Schools.

# ACCREDITED ELEMENTARY SCHOOLS

FOR THE YEAR 1935-36

Group I—A school of ten or more teachers.

Group III—A school of three to six teachers.

Group II—A school of six to nine teachers.

Group IV—A school of one or two teachers.

A Limited Standard School meets all required points and at least 25% of the flexible points, but the building need not measure up to all modern specifications.

A Regulation Standard School meets all required points and 25% of the flexible points.

A Superior Standard School meets all required points and 75% of the flexible points.

(For requirements for standardization see Standards for Florida Elementary Schools, published by the State Department of Public Instruction, August 1, 1935.)

### CHAPTER III

---

#### SCHOOL FINANCE

During the biennium ending June 30, 1936 the State Director of School Finance has engaged in the activities enumerated below:

1. Checked budgets submitted by the County Boards of Public Instruction, and tabulated the data therein contained for the information of the State Board of Education.
2. Checked the financial reports of the County Superintendents to the State Superintendent, and assisted County Superintendents when necessary in correcting these reports.
3. Assembled educational data for Legislators and others upon request.
4. Computed Instruction Units for the various counties as directed by law.
5. Prepared a proposed Maximum Salary Schedule for payment of salaries of teachers from State funds, and collected criticisms and suggestions with reference to the same.
6. Prepared three tentative plans for payment, in part, for transportation from the Teachers Salary Fund, and explained these plans to many County Superintendents and some Board Members.
7. With the assistance of the State Auditor's Office made tables showing the legal compensation due County Superintendents and Board Members.
8. Made a table showing the legal amounts of Race Track Funds to which the schools of certain counties are entitled.

9. Answered many questionnaires.
10. Worked on a Master Table of Florida school data from the year 1860 down to the present time.
11. Spent several days checking Planning Board surveys of the various county school systems and making suggestions with reference to consolidation of schools.
12. Drafted certain proposals for changes in the Florida Constitution and Laws having to do with the public school system, and checked obsolete school laws now on the statute books.
13. Advised with a large number of County Superintendents with reference to requisitions for high school textbooks.
14. Assisted in checking applications for State accreditation of elementary schools.
15. Inspected for possible accreditation about 850 high and elementary schools, and inspected rural schools in a number of counties.
16. By special request inspected nine school busses in Columbia County.
17. Revised transportation report blanks and check sheets.
18. Assisted in revising the standards for elementary schools.
19. Taught a class for one week at the University of Florida (Summer 1935).
20. Attended ten district education meetings and made eleven addresses.
21. Attended two annual high school conferences.

22. Attended the N.E.A. Meeting (Washington D. C.) and the Department of Superintendence Meeting at St. Louis; also one session of the American Association of Junior Colleges at Nashville.

23. Attended a County School Board and District Trustees Meeting in Jacksonville.

24. Attended a conference of Classroom Teachers in Gainesville.

25. Assisted other State Department men in a conference with school officials in the city of Pensacola.

26. Delivered one commencement address.

27. Prepared a table showing the ability of each county to support its schools.

### ACCOUNTS AND BUDGETS

The accounting system for county boards of public instruction, provided for in Chapter 16,170, Acts of 1933, has now been in operation since January 1934, and is proving to be highly satisfactory. It has simplified the bookkeeping procedure, and has in most cases simplified the tasks of budgeting and making financial reports. In some counties, however, the books are poorly kept, and the making of accurate budgets and reports is practically impossible. A good accountant should be employed for whole or part time in the office of each county superintendent wherever this is not already being done.

Budgets and financial reports have reached the State Superintendent more promptly this year than heretofore, and their general excellence has been much improved. Conscientious budgeting has been noted in nearly all of the counties, and a determination to keep expenditures within the budgeted limits is most gratifying. However, some of the counties have apparently made little effort

to keep expenditures down to the amounts budgeted. (See Table I)

Difficulties encountered in budgeting were discussed at some length on pages 118-121 of the biennial report for 1932-34, but since that time the obstacles to good budgeting have not been removed. Briefly stated, the following measures of relief should be brought about:

1. Assessed valuation of property for a given year should be known at least a month before the budget is to be sent to Tallahassee.
2. If there must be budget commissions in the various counties they should be subject to uniform laws.
3. County Boards should be able to know with some degree of certainty how much they may expect to receive from State sources in time to include the same in their budgets.
4. Budgets deliberately and carefully made should be strictly adhered to. The making of later supplementary budgets should be discouraged as confusing and unnecessary.
5. Some method should be devised to require budgets to be made on expected rather than on fictitious anticipated receipts.
6. Budgeting for payment of back debts should be stated clearly in the laws.

TABLE I

## A COMPARISON OF AMOUNTS BUDGETED FOR TWO SUCCESSIVE YEARS AND THE AMOUNTS ACTUALLY EXPENDED FOR THOSE YEARS

(Amounts are as budgeted at first of school year; some changes were granted later by State Board of Education)  
Sources of Data: (a) County Budgets; (b) Annual Reports of County Superintendents

\*31 counties expended more than budgeted for 1934-35; 12 exceeded the budget in 1935-36; Bradford, Calhoun, Citrus, Collier, Dade, Leon, and Putnam exceeded the budget for both years.

\*\*Amounts not budgeted at beginning of year, but reported later, caused expenditures to be less than the amount budgeted for the same.

†Percentages shown in parentheses ( ) are those resulting from later additions to the amounts budgeted at the first of the year.

Table I should need no explanation, but the following observations may be made:

1. Thirty-one counties reported total expenditures in excess of amounts budgeted for the year ending June 30, 1935. It is possible that in some cases funds in excess of budgeted amounts from Federal sources were expended, but the budgets were not revised to include these expenditures.

2. Twelve counties reported expenditures in excess of their budgets for the year ending June 30, 1936.

3. Seven counties exceeded their budgets for both years under consideration.

4. Eleven counties submitted supplemental budgets showing increased anticipated expenditures in 1934-35. Six such changes were made in 1935-36, and in the case of Palm Beach County the change caused expenditures for that year to be less than the amount budgeted.

### **RECEIPTS AND EXPENDITURES**

Table II shows receipts from all sources, and expenditures for the eight items of the school budget for five successive years.

TABLE II  
SCHOOL RECEIPTS AND EXPENDITURES  
1931-32—1935-36  
(Data Secured From Annual Reports of County Superintendents)

\*Includes cost of textbooks.

Some of the facts brought out by this table are:

1. Expenditures exceeded receipts for three of the five years. This may be due to unusual payments for bonded indebtedness from interest and sinking funds for those years.

2. The maximum of receipts from State sources falls in 1935-36; that for county and district sources in 1934-35.

3. The minimum of receipts from State, county, and district sources falls in 1932-33.

4. Expenditures reached their highest peak in 1935-36, their lowest in 1933-34.

5. The expenditure for instruction ranks highest of all items in all of the five years; debt service ranks second for the five year period. If the amount being spent annually for debt service could be turned into the other items the efficiency of the schools could be increased by 25 to 35 per cent.

6. Auxiliary agencies (which includes transportation) ranks high as an expenditure item. Transportation costs are mounting rapidly. To what extent these costs are justified should demand the attention of those interested in the welfare of the schools.

Figure I shows graphically the data given in the first part of Table II.

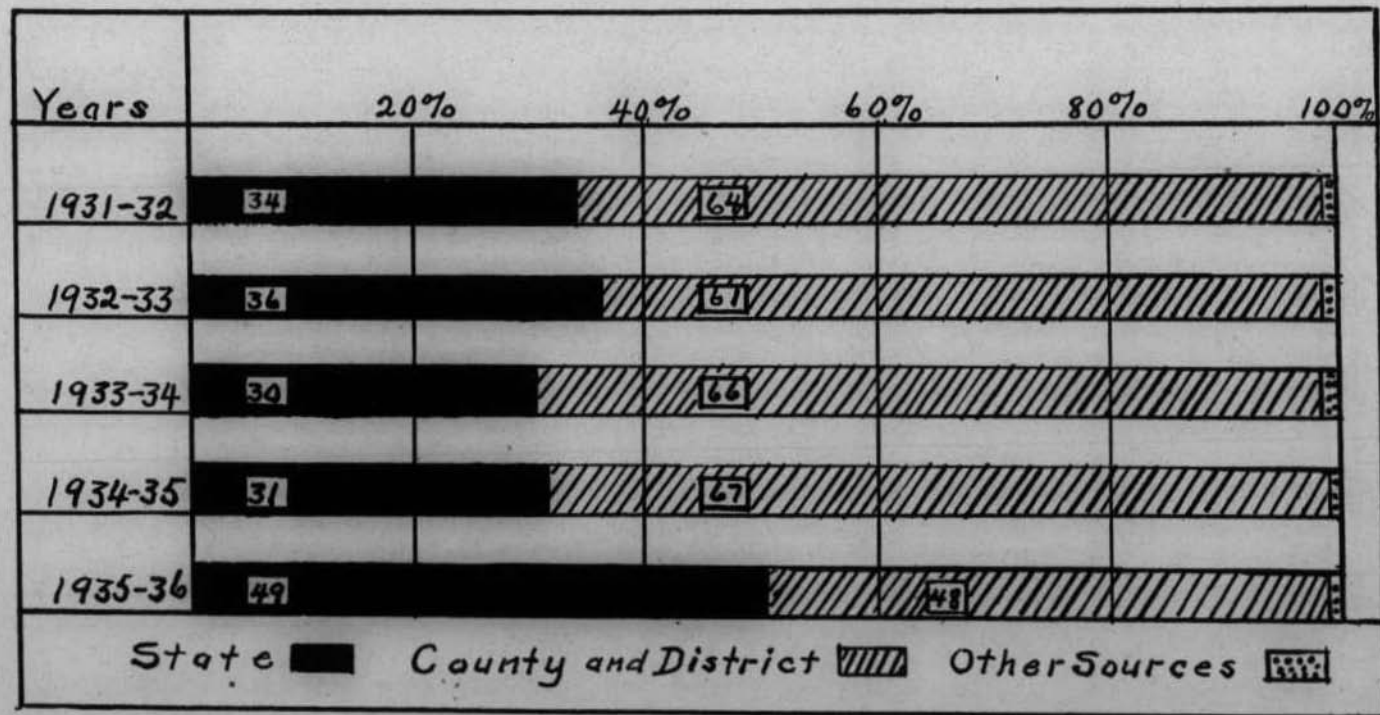

FIG. 1.—Percentages of all school receipts from various sources for the years 1931-32 to 1935-36, both inclusive. (Data from reports of County Superintendents to the State Superintendent of Public Instruction.)

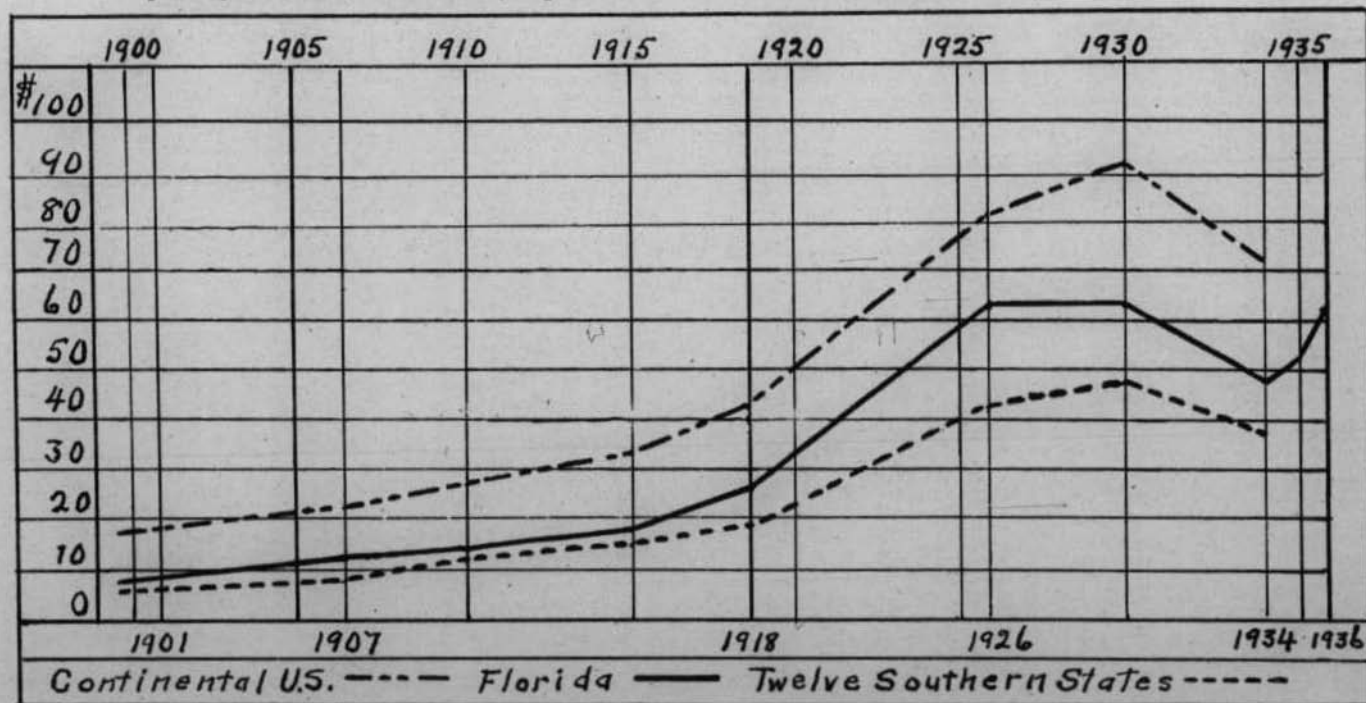

The following observations may be made from a study of this figure:

1. Receipts for the years given are for all common school purposes.
2. For the first four years of the period counties and districts provided about two-thirds of all receipts and the State practically one-third.
3. For the year 1935-36 the State furnished practically one-half of all receipts for school purposes and counties and districts one-half.
4. Receipts from "Other Sources" have not been more than four per cent of the total for any one of these years.

### COMPARATIVE COSTS

Charts I and II, and Figure 2 give comparative cost data for the public schools of Florida, twelve southern states, and for Continental United States through a number of successive years.

CHART I.—Annual Cost for Current Expenditures, Including Interest\*, per Pupil in Average Daily Attendance Twelve Southern States\*\*, Florida and Continental U. S. (Data† obtained from Biennial Surveys and Reports compiled by the Office of Education, Department of the Interior, Washington, D. C.)

\*Interest expenditures for Arkansas, Kentucky, Louisiana, and Mississippi not available for 1926; hence not included for that year.  
 \*\*Data for Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Texas, and Virginia were used.  
 †Data for Florida for 1935 and for 1936, on file in the State Department of Public Instruction, could not be compared with that for the southern states and Continental United States because the Washington reports for those years are not yet available.

Chart I shows the annual cost per pupil in average daily attendance. This cost is based upon current expenses, including interest charges for the years compared since 1900.

From this chart we see clearly that:

1. Expenditures per pupil in average daily attendance have gradually increased from less than twenty dollars for the country as a whole in 1901 to more than ninety dollars in 1930.

2. The average cost per pupil for the twelve southern states has been about fifty per cent of that for Continental United States.

3. The cost for Florida pupils has been much above the average for the twelve southern states. This is noticeably true since 1918.

4. All three of the curves reached their highest peak about 1925-30, and since that time show a sharp decline.

5. Cost per pupil for Florida took a decided upward turn in 1934-35, and in 1935-36 the upward trend was more pronounced. Comparable data for the southern states and the country as a whole were not available for those two years.

Figure 2 shows comparative annual cost for pupils in average daily attendance for Florida, twelve southern states, and for all the states of the country as a whole for the years 1925-26, 1929-30, and 1933-34.

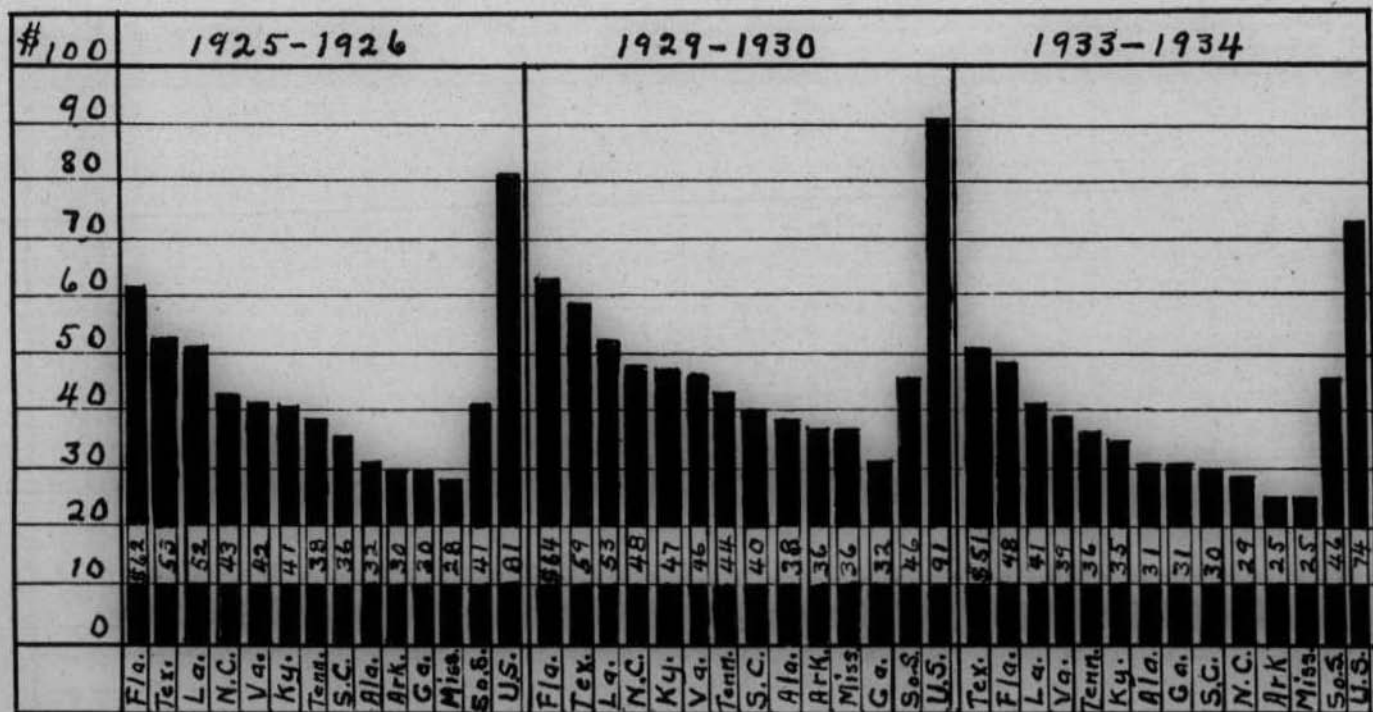

FIG. 2.—Annual Cost for Current Expenditures, Including Interest, Per Pupil in Average Daily Attendance for Twelve Southern States and for Continental United States for the years 1925-26, 1929-30, and 1933-34. (Data secured from Biennial Surveys of Education, Office of Education, Washington, D. C.)

The following observations can be made from a study of this figure:

1. Florida leads the southern states in the cost per pupil in average daily attendance for 1925-26 and 1929-30, and ranks next to the highest in 1933-34.
2. In 1929-30 costs per pupil were higher than in either of the other years shown in this chart.
3. Average cost per pupil for the southern states is only about fifty per cent of the cost per pupil for the nation as a whole.
4. Costs per pupil declined sharply in 1933-34 for the southern states and for the entire country.

Chart II is similar to Chart I, but shows costs per pupil in average daily attendance for all school expenditures except payment of bonds. In other words this chart is exactly like Chart I except that it includes payments for capital outlay in addition to current expenses and interest.

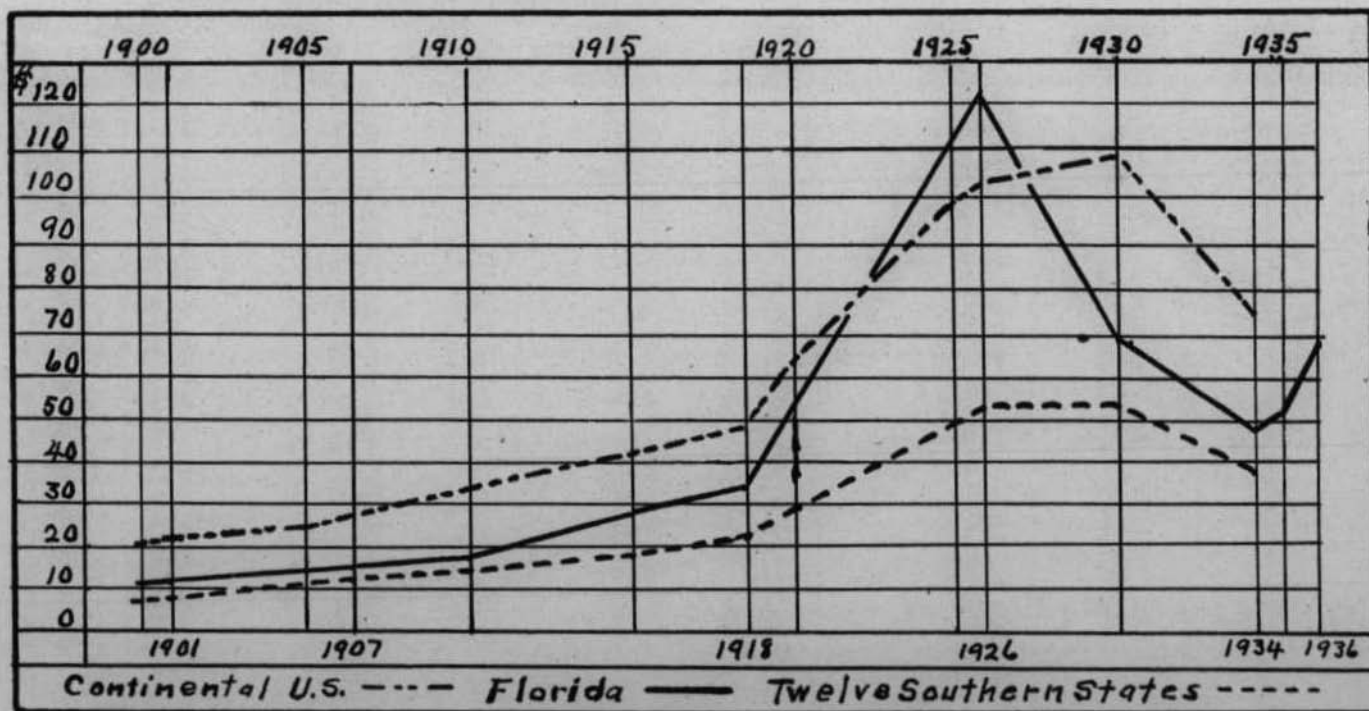

CHART II.—Total Annual Cost, Including Interest and Outlay, Per Pupil in Average Daily Attendance in the Public Schools of Twelve Southern States\*, Florida\*\*, and Continental U. S. (Data obtained from Biennial Surveys and Reports, Office of Education, Washington, D. C.)

\*Data for Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Texas, and Virginia.

\*\*Data for 1935 and 1936 obtained from records of the State Department of Public Instruction.

Study of this chart brings out these facts:

1. Up to the year 1918 Florida's rank is between that of the southern states and the curve for Continental United States.
2. In 1926 Florida ran ahead of the nation in expenditure per pupil. This can be accounted for by the fact that during that year more than \$14,000,000 were expended by the State under the head of Capital Outlay.
3. After 1930 costs per pupil declined sharply for the nation as a whole and for the southern states.
4. The curve for Florida for 1935 and for 1936 turns definitely upward.

### OUTSTANDING INDEBTEDNESS

The rapid growth of Florida's population in recent years, and the consequent necessity for enlarged school plants and teaching facilities, has compelled the formation of a very large school debt.

According to comparative data furnished by the Office of Education, Department of the Interior, Washington, D. C., Florida in 1930, 1932, and 1934 ranked among the four or five states of the Union having the highest indebtedness per pupil in average daily attendance in their schools. In 1930 Florida's school debt was \$248.33 per pupil, in 1932 \$210.57; and in 1934, the last year for which comparable data are available, it was \$193.48 per pupil.

Chart III made up from data on file in the State Department of Public Instruction shows graphically the growth for ten successive years of Florida's school debt, and the gradual decline of the same since 1928.

CHART III.—Outstanding School Indebtedness for Florida 1920-1936. (Based upon data on file in the Office of the State Superintendent of Public Instruction.)

This chart is easily understood, but the following comments may be made:

1. In 1920, the school debt was less than \$10,000,000.
2. There was a rather marked increase in the amount of the debt up to 1925. After that date it mounted rapidly to the peak of \$67,473,146 in 1928.
3. From 1928 to the present time (1936) the debt has been gradually diminished, though there were slight upward trends in 1931 and 1936.
4. Now that the State is fairly well supplied with modern school buildings the debt ought to go on diminishing for a number of years.

Table III gives some details of the school debt situation not brought out in Chart III. Here data having to do with outstanding indebtedness for four successive years (1932-33 to 1935-36 inclusive) are given.

TABLE III

OUTSTANDING INDEBTEDNESS FOR 1932-33, 1933-34, 1934-35, 1935-36  
(Based upon Data on File in the Office of the State Superintendent of Public Instruction)

\*Not including Other Indebtedness or Interest Past Due.

\*\*Not including Interest Past Due.

It will be noted that:

1. Notes, Bonds and Time Warrants, and Other Indebtedness are treated separately.

2. County and District Indebtednesses are given on separate lines for each of the four years. This is also true for Other Indebtedness and all Totals.

3. Principal Past Due, Principal Not Yet Due, and Other Indebtedness are given for the years 1933-34, 1934-35, and 1935-36.

4. Interest Past Due appears for the first time in the year 1935-36 (County Superintendents' reports to the State Superintendent first contained this item in 1935-36).

5. The Grand Totals of Indebtedness for the first three years under consideration would have been larger had all the items recorded for 1935-36 been available.

6. The Grand Total for district indebtedness exceeds many times over that of county indebtedness for each of the four years.

7. In almost all cases of Totals there is a gradual decrease in amount from 1932-33 to 1934-35. There is an increase for 1935-36.

8. The grand total decrease in debt for the four years is \$3,491,705.51.

9. The percentage that all Principal Past Due for the year 1933-34 is of all Principal Not Yet Due for that year is about 12. That for 1934-35 is a little more than 10, and for 1935-36 it has been reduced to 7 per cent.

10. The amount of Interest Past Due on June 30, 1936 was \$1,655,591.60. This is a considerable amount, but not enough to cause alarm if we steadfastly set ourselves to see that the amount does not grow larger.

## CONCLUSION

The financial outlook for Florida schools is encouraging. We have come safely through the experiences of expansion and growth, through a quarter of a century, that have affected the life and well being of the State. We have weathered the storms of the World War, the boom, and the depression, and are now entering upon a new era of prosperity. The schools owe money which must be paid, but there is little disposition to evade payment. Our school debts are large—perhaps larger than they should be—but rather small in comparison with those of municipalities and other governmental functions and agencies. Much to our encouragement the total of school debts is gradually being reduced. The State is more and more coming to the rescue of the schools; but let us hope not to the detriment of local initiative and the purpose to do for ourselves one hundred per cent of what we are able to do.

Teachers are being paid better salaries, but not near as much as they must be paid. Our salaries are only about sixty-one per cent as much as are being paid, on an average, for the nation as a whole. Better pay will give us better teachers, and better teachers will inevitably be required when selection can be made through payment of professional salaries.

Consolidation of schools and transportation of children to school have become a part of our system, and very few persons would be willing to have a return of the small, weak schools of thirty years ago. However, transportation costs are mounting, and care must be exercised to keep expenses down within reasonable bounds. Transportation costs per pupil must of necessity be greater in sparsely settled areas than in those with more dense populations. State aid for transportation must be apportioned, in amount, according to the actual needs of counties as

determined by definite surveys and scientific determination of those needs.

The new school code should provide for a much enlarged and more flexible school system than the one we now have. State aid for counties should be conditioned upon the maximum of local effort to provide and maintain schools; but the State must be quick to detect local need, and must assist in guaranteeing to every community a minimum school program, leaving to each community the ability to extend its program beyond that guaranteed by the State.

Respectfully submitted,  
R. M. EVANS,  
State Director of School Finance

## CHAPTER IV.

### NEGRO SCHOOLS

During the biennium 1934-36 the State Agent visited approximately 750 Negro schools each year. In all counties except three the superintendent accompanied the State Agent. The visits were made for the purpose of inspecting the schools, acquainting the superintendent with the conditions in the schools and making recommendations for improvement. The visiting record below was the form used for recording observations. After all the schools in a county had been visited a meeting of the Negro teachers was held at the county seat. The records of findings at the schools were placed on the blackboard so all teachers could read them. Teachers were complimented on good situations and told how to improve poor situations. If possible, successful local teachers were used for telling unsuccessful teachers how to improve. Teachers were given suggestions on methods of teaching, promotions, grouping of children, division of work among teachers, making and following lesson plans, adapting the curriculum, improvement of the school plant, etc.

It was by visiting the schools that the State Agent was able to learn about each school, show the superintendent the conditions and help improve the schools. After the visit to the county a report of findings and recommendations were sent to the superintendent. In most cases the superintendent has used the report as a guide in improving his Negro schools.

 REMARKS: .....

Statistics showing certain conditions in Negro schools for the year 1934-35 are given herewith. (Tables 1 to X). There statistics are discussed and recommendations for improvement are given.

**ENROLLMENT AND CLASSIFICATION OF PUPILS****See Table 1**

The total enrollment of Negro children in Florida schools in 1934-35 was 102,279. Of this number 27% were in the First Grade. This percentage is out of proportion. However, 33% of the children were in the First Grade in 1932-33. The decrease of 6% in the First Grade is very gratifying and is possibly due in part to the

efforts made toward that end. For several years the teachers' attention has been called to the situation in the First Grade. Many bad practices were observed. These practices were discussed in the 1932-34 report. Suggestions for correcting the bad practices were made and distributed to all teachers in the State. Inspections were made to see if the suggestions were being followed. The suggestions were:

1. Divide work fairly among teachers
2. Make and follow a daily schedule
3. Set up objectives to be attained in each class
4. Make and follow daily lesson plans
5. Enroll all beginning children in First Grade
6. Enroll First Grade children during the first month of school only
7. Do not enroll children younger than six years old.
8. In small schools teach all First Grade children in one group.
9. Do not keep beginning children in one class a whole year and in the First Grade an additional year. The so-called Chart class, Primer, or beginning work, is part of the First Grade. Teach the beginning children so they will finish all of the First Grade in one year.
10. Create supplementary reading for children in lower elementary grades by writing on the board the words and sentences they use in playing and working at home and at school. Children do not learn new words by reading **one** book several times a year. Create supplementary reading for desk work by using a hectograph. (See directions for making a hectograph)
11. Teach so that the children will acquire the habit of thoroughness
12. Adapt the curriculum and textbooks to the school
13. Fill your register completely and keep it correctly (read directions)
14. Keep your school, grounds, and toilets **clean**
15. Provide washing facilities for the children
16. Beautify your schoolhouse and grounds (Read 1935 Rosenwald Day Program)
17. Teach good health habits
18. Teach some industrial work

It is believed that if superintendents should select qualified teachers, **direct** their work and provide them with adequate room and materials the percentage of children in the First Grade would be reduced to a normal figure.

The percentage of children in grades 1-6 was 84.4. Five out of every six children were in the first six grades. In four counties all of the children were in grades 1-6. In twenty-eight other counties more than 90% of the children were in grades 1-6. The situation in the thirty-two counties was probably due to the fact that school officials have not provided adequate schoolhouses, materials, qualified teachers, adequate salaries for teachers, and high school opportunities for Negroes.

In 1934-35 11.7% of the Negro children were enrolled in the seventh, eighth and ninth grades. This percentage is misleading. In many counties there are really no junior high school opportunities provided for Negroes. Most of the children in these grades are carrying on the elementary work under the eight grade elementary plan. In some small schools ambitious teachers enroll children in the ninth grade and attempt to teach them high school subjects. The teachers are unqualified to teach the subjects they attempt. The pupils are unqualified to profit from the subjects as they are taught. The teachers use time that should be devoted to the great mass of children in the lower grades. In counties where junior high school opportunities are not provided it is recommended that the individual schools offer work through the eighth grade and that the counties provide high school opportunities at a central place in the county and transport high school children to the center.

In 1934-35 less than 4% of the children enrolled were in grades 10, 11, and 12. Twenty-eight counties had no children enrolled in these grades. Generally the counties that failed to provide high school opportunities for Negroes employed the most poorly trained teachers, paid the lowest salaries, and had the poorest provision of rooms and teaching materials.

It is recommended that all counties in which the population is large enough to support a high school for the Negroes that high schools for Negroes be provided, and

transportation of high school children be provided. In counties where the population is too small to support a high school for Negroes it is recommended that transportation to high schools in adjoining counties be provided. This is being done now from Indian River and Martin Counties to St. Lucie County.

### **Ratio of Teachers to Children**

The average number of children enrolled per teacher in 1934-35 was good but is misleading. It is an average and does not show bad situations in which the number of children per teacher was too large. However, the ratio is far better than formerly.

### **School Term**

Most of the counties have operated their Negro schools a term of eight months. The average term for the State was 165 days in 1934-35. Bradford County Negro schools were operated only 120 days; Hamilton County Negro schools were operated 132 days; and Nassau County Negro schools were operated 133 days. The shortening of the term in these three counties was indefensible since these counties received as much per instruction unit for Negroes as did the counties that operated their Negro schools 160 days and longer. It is recommended that all counties be required to operate their Negro schools a full term.

## **TRAINING AND CERTIFICATION OF TEACHERS**

### **See Table II**

The training and certification of Negro teachers are making rapid progress. The employment of trained and certificated teachers is not keeping pace with production. This failure is due to a variety of reasons. Many county school officials do not realize that hundreds of Negroes have attended college, obtained Graduate State Certificates and are thus qualified to teach. They have the custom of employing local Negroes to teach regardless of training. Some school officials are sympathetic with local Negroes and appoint them to teaching positions in

order to help them financially. Also, some school officials think the selection of Negro teachers really does not matter, hence the appointment of unqualified persons when qualified teachers are available. Happily this situation is fast changing. Possibly the greatest reason why unqualified teachers are employed is that they can be secured for very small salaries. To employ qualified teachers would cost more money. Since the State provides the funds for teachers' salaries, the solution to this problem is the enforcement of the teacher unit law or the enactment and enforcement of a minimum salary schedule.

It is recommended that the wholesale issuance of temporary certificates be discontinued. The temporary certificate is supposed to be issued in an emergency. It is recommended that the applicant's scholastic achievements and teaching experience be evaluated as the basis for the issuance of the temporary certificate. It is recommended that the issuance of Third Grade Certificates be discontinued in 1938, that the issuance of Second Grade certificates be discontinued in 1939, and that the issuance of First Grade certificates be discontinued in 1940. At the present rate of graduation the supply of college trained teachers will exceed the demand thereafter. If an examination type of certificate be continued, it is recommended that it be based on a prerequisite of two years of college training.

### **TEACHER'S SALARIES**

See Tables III, IV & V

Nearly half of the teachers employed in 1934-35 received less than \$400.00 annual salary. This amount of money is inadequate for the support of teachers. Most of the Negro teachers have dependents. In order to support themselves and their dependents, Negro teachers

are forced to live on a very low scale and supplement their income by other than school work. About 60% of the teachers attend summer school each summer. They are able to do so by borrowing against the next year's salary at an exorbitant rate of interest.

In 1934-35 fifty-five counties spent less on Negro teachers' salaries than they received from the State on instruction units allotted to Negro schools. Twelve counties spent all they received from the State for Negro schools on their Negro schools and some of their local income. It logically follows that those twelve counties pay their Negro teachers best, employ the best Negro teachers and have the best Negro schools.

The fifty-five counties that paid their Negro teachers so poorly received from the State \$936,876.24 on instruction units in their Negro schools. They spent \$703,981.80 for salaries on the instruction units in their Negro schools leaving a difference of \$232,984.44. This difference varied from 2% in Holmes County to 69% in Union County.

The average annual salary of Negro teachers in Florida in 1934-35 was less than half the average annual salary for white teachers in the State. The same ratio existed in most of the counties with some exceptions.

It is recommended that a State minimum salary schedule be adopted based on training and experience. There should be no distinction in pay between rural and urban teachers because of geographical location. There should be no distinction of pay between teachers because of different divisions within a school. Until a State salary schedule be adopted it is recommended that county superintendents follow the above suggestions in making a salary schedule.

**PER CAPITA COST OF INSTRUCTION****See Table VI**

In 1934-35 the state average per capita cost of instructing white children was \$40.72 whereas the state average per capita cost of instructing Negro children was \$14.78. The state average per capita cost for white children was less than half the average per capita cost for the Nation. Using the per capita cost of instructing children in the Nation as an index it is very evident that the quantity and quality of education provided for white children in Florida was inadequate. By the same index the quantity and quality of education provided for Negroes was more inadequate. Unfortunately we still think of public education in the light of personal privilege and gain and for that reason we are unwilling to provide better educational opportunities for Negroes. Public education is provided for the purpose of giving the commonwealth an intelligent participating citizenship. What we fail to pay in providing adequate educational opportunities for any group, thus preventing ignorance and mal-adjustments, we later pay many times more in costs of police, courts, jails and penitentiaries. This is especially true of Negroes. Prevention usually costs less than cure. In the case of education we are not spending enough on prevention and the so-called cure tends to be punitive rather than corrective in its functioning. Our punitive institutions cost us many times more per capita than our educational institutions.

It has been traditional to think of providing educational opportunities for a group in proportion to the expense of education borne by the group. This thinking and practice are now out-moded by progressive people.

If we accept the principle of taxing all for the support and maintenance of governmental institutions then we must go all the way in applying the principle and not

just part of the way in providing educational opportunities impartially. All people pay taxes, directly or indirectly, and the immediate return to the payer is seldom in proportion to the amount paid. Negroes as a group and race are the minority group in our Nation and State. Due to their low economic status they pay directly a small part of the cost of support and maintenance of government. However, it is estimated that they pay a considerable part indirectly through rents and purchase of goods. It is recommended that better public instruction be provided for Negroes. This will cost more money immediately but should result in a better educational product and eventually reduce the total cost of government a greater figure by lowering the costs of our punitive institutions.

## **SCHOOL PROPERTY**

### **Buildings**

See Tables VII, VIII & IX

In 1934-35 one thousand and five buildings were used for Negro schools (Table VII). Six hundred sixty-four of these buildings were owned by the counties. Three hundred forty-one were not owned by the counties. Churches, lodges and shacks comprised this latter group. Many of the former group owned by the counties were inadequate for school purposes.

A few superintendents have been very energetic and successful in securing Federal aid for the construction of schoolhouses for Negroes. Others have exercised little effort and consequently attained little or no success.

Approximately fourteen hundred additional classrooms are needed to house the present enrollment of Negro school children in Florida. (Table IX) These additional rooms would merely accommodate the present needs and would not provide for increase of enrollment.

Under the present taxing system, with all counties debt burdened and a large portion of property removed from taxation through homestead exemption, most of the counties are not and apparently will not be able to provide necessary class-rooms for either white or Negro schools. The school children will be relatively handicapped by failure to provide the needed class-rooms.

### **Water Supply, Toilets, and School Equipment**

As in the case of schoolhouses some superintendents provided their Negro schools with pit toilets, water supply and school equipment such as blackboards, desks, heaters, etc., from local income and with aid from national agencies, whereas other superintendents did nothing. In a few South Florida counties and in most of the North Florida counties many Negro schools are housed in churches, shacks, and lodges, and have no toilets, water supply, desks, blackboards, etc. Counties use these schools as a means to get State funds and yet these counties invest little or nothing to improve the means. It is recommended that the State exert some influence to require the counties to provide adequate sanitary toilets, adequate sanitary water supply, and adequate school equipment in their Negro schools.

### **IMPROVEMENT AND BEAUTIFICATION**

It is recommended that all counties require all Negro schools to improve their facilities and beautify their grounds. Most of the Negro homes are drab, poorly built, poorly lighted, poorly ventilated, unpainted, and in bad state of repair. Unless the Negro children get impressions from and concepts of respectable buildings, they will have no ideals for improving the housing facilities of their people. Likewise, the yards of Negro homes are usually wind-swept, rain-washed, debris-strewn, and bare of grass, flowers, shrubbery and trees. Unless they

get constant impressions of cleanliness, orderliness, and beauty at school they will have no standards and ideals for beautifying the premises of their people. In improving and beautifying the school, it is most valuable for the Negroes themselves to do the work. It is only in this way that they really learn the value, meaning and habit of improvement and beautification.

The following suggestions have been given for improving and beautifying Negro schools throughout the State:

**SCHOOL GROUNDS:** Clean off the briars, weeds, sand-spurs, stumps, scrub undergrowth, sticks, limbs, rocks, etc. Cut the sticks and limbs and use them for fuel.

Place a covered can or box on the school grounds to receive waste paper, cane peelings and chews, and peelings of fruit. Train the children to place trash in the can or box. Bury or burn the trash each afternoon.

If the school grounds wash, use rocks and poles to fill the gulleys and grass to hold the soil.

If the soil has been washed or blown away from the pillars of the building, fill in. Plant Bermuda, centipede, carpet or St. Augustine grass in these places.

It is recommended that the grounds of all rural schools be fenced. The posts should be cedar, cypress, or heart pine, with slanting tops to shed rain. Heavy wire fencing of close mesh should be used. The posts should be well braced at corners and gates and the wire should be tightly stretched. Cattle gaps and stiles are more satisfactory than gates.

Shrubby that is not hurt by freezes should be set inside the fence, around the base of the building, and around the toilets. Ligustrum, abelia, pittisporum, magnolia, cherry laurel, and yaupon are hardy evergreens

well adapted for beautification of public property. Freezes do not kill these plants. They withstand dry weather well. All of them have thick luxuriant dark green foliage. Pruning increases the density of the foliage. The cheapest way to secure ligustrum, pittisporum, and abelia is to collect cuttings when plants are pruned in the winter. The cuttings should be stripped of leaves and put in the ground about eight to ten inches. The ground should be kept moist and the cuttings should be protected. When spring comes the cuttings send down roots and grow as other plants. Stakes should be driven into the ground around the cuttings to protect them. After the cuttings have made a good start stable manure on top of the ground around the plants and plenty of moisture are needed to develop large luxurious plants. Magnolia and cherry laurel can be gotten in most Florida woods. The plants should be transplanted with generous pruning of branches and all leaves. Stalky plants with little foliage should not be grown.

In addition to beautifying the school grounds these plants hold the soil intact at the base of the schoolhouse and prevent the building from sagging and settling due to the soil being displaced by wind, rain and play of children. Beautiful school grounds increase respect for property. Beautiful school grounds should stimulate improvement and beautification of homes.

Plant flowers and a school garden.

Provide play grounds.

**WATER SUPPLY:** Provide an adequate supply of pure water, sanitary drinking facilities, and washing facilities.

**TOILETS:** Erase all writing and drawing in toilets. Sweep and scrub seats and floors. Provide urinal for boys. Provide paper (newspaper, catalogues, etc.) for both sexes. If sanitary pit toilets are not provided by the county then have patrons build toilets.

**EXTERIOR REPAIRS:** Build a guard at the base of the house to keep out hogs, dogs, skunks, et al. Poles driven into ground close together, rocks laid tight, and boards nailed closely can be used for this purpose.

If the steps are unsafe, rebuild them. Ask your school officials for the materials. You and your boys do the work.

If the doors sag, you and your boys rehang them.

If the window panes are out, ask your school officials for panes, putty, and sprigs. You and your boys put in the panes. If the window sashes are rotten or gone, ask for new ones and put them in.

Repair leaks in the roof. You and your boys cover cracks in the wall with strips or siding.

Paint the building if possible.

**INTERIOR REPAIRS:** Arrange the desks in an orderly manner. Keep them thus. Do not allow desks to be arranged so that children sit leaning against wall or window; thus closing aisles. Remove coverings from windows so that maximum light enters the room (except direct sunlight). Arrange the seats so that the children will not face an open door or open windows.

Set up the stove so that a minimum of pipe is needed. Set the stove securely on legs or bricks; on metal strip or sand bed.

Fit the pipe tightly so it will not smoke, and get new pipe if necessary.

Repaint and renail blackboard wherever necessary.

If you need book shelves, you and your boys build them. If you need a table, you and your boys build it.

If partition walls, ceiling, and floor need repairing,

your and your boys make the repairs. Paint the ceiling white, the walls cream, and the wainscoting brown or tan.

If you do not have desks and are using benches, either shorten the legs of the benches or build a foot rest for the small children. Provide writing surface for children by attaching a smoothly planned twelve inch board to the back of each bench at the proper height.

If you have desks, repair them; sand them if necessary and repaint them.

This office will furnish you with drawings of pit toilet, home-made student's desk, home-made teacher's desk and table upon request.

### **TEACHING MATERIAL**

A few counties provide Negro schools with some teaching materials. Most of the counties provide nothing. Teaching materials are necessary in order to do effective teaching. It is recommended that all counties provide adequate teaching materials for all Negro schools.

### **THE JEANES FUND**

During the biennium 1934-36 the Jeanes Fund helped the following counties: Alachua, Broward, Escambia, Gadsden, Jackson, Jefferson, Leon, Levy, Madison, Manatee, Marion, Orange, Palm Beach, Pinellas, Polk, Putnam, Seminole, Suwannee, Volusia, and Wakulla. The counties received \$5400 in 1934-35 from the Jeanes Fund. During 1935-36 the Jeanes Fund and the Slater Fund granted \$7400 for the Jeanes work in Florida.

Hillsborough County employed a white man who gave full time supervision to the Negro schools. Duval County employed a white man who gave part time supervision to Negro schools. Dade county has employed no one

to be responsible for Negro schools. It was only through the interest and kindness of Mr. I. T. Pearson that the Negro schools received any attention other than routine affairs.

The best teaching is being done in those counties where some one is employed to visit the Negro schools to help teachers improve instruction, attendance, the school plant, etc. The service rendered by the Jeanes Teacher is indispensable. Part of one monthly report of a Jeanes Teacher is given below to show the nature of the work done:

"The superintendent has announced that an intra-county improvement and beautification contest will be initiated this year. A prize of ten dollars toward library books will be given the winning school. As an aid toward impartial judgement, pictures are being taken of all school grounds this month. Another picture will be taken in April or May as a check on improvements made. Eight hectographs were purchased by the Board and distributed to certain schools. One hundred sheets of post card stock were distributed among primary teachers in the county. These were to be used as strips for flash cards and material for reading charts (in Grade One). Pocket charts for motivating reading readiness were made by the Jeanes Teacher and taken to all First Grade teachers and all one teacher schools.

"Boys in some of the schools were given the material and shown how to make chairs for reading corners. The teachers and pupils are being urged to finish the chairs (which are being made from parts of pepper and tomato crates), and to provide suitable picture and story books for the reading corner. Provision of books is very slow, as teachers say they cannot afford to buy them. Requests have been made for Gates-Huber Manuals for teachers of Grades One, Two, and Three. The

superintendent also has on hand Intelligence Tests to be administered in negro schools this month.

Primary .....	300
Intermediate .....	1500 (or more)
High School .....	125

"The Jeanes Teacher is now making a study of promotion by levels in Reading as suggested by Clarence R. Stone in *Better Primary Reading*—a book published this year. A study will also be made of assignments sent out by supervisors of reading in the Cleveland system. An adaptation of feasible assignments will be made for our county if possible. Already this term we have initiated the plan of having slow pupils read supplementary books for the grade in which the pupil was last year before beginning the basal book for the pupil's present grade. A greater interest in reading is being assured by this plan.

"Both schools opened in July. My first tasks were the checking of schedules, registers, lesson plans, and observation of the progress made by the pupils in the First Grade. The teacher of Grade One in the school was attempting to teach sixty-four pupils in a room that seats thirty pupils comfortably. It was suggested that she divide the pupils into two groups and teach one group in the morning and one group in the afternoon. Her methods of instruction are poor; her pupils make little progress each year. I find her attitude fair; her initiative and ability mediocre. I would suggest that the teacher be given Third or Fourth Grade another term, as she possesses poor technic for First Grade teaching. All teachers had put forth an effort to improve their rooms. Bookcases had been made for each room and tables made for those teachers who had no adequate desk. The English teacher had purchased a bulletin board, secured a library table, and dictionary stand—

the latter two objects were made by one of the male teachers and the older boys. Bookcases were made in the same manner. The lumber was furnished by the Board. The school presents two rather serious problems:—the very wet and swampy condition of the grounds and the fall in attendance after the first two or three months of school. The school is held in a church building and little can be done to make it attractive. The teacher might put forth greater effort toward teaching proper habits of health and cleanliness. She should also organize a parent organization with the aims of improving the personal appearance and attendance on the part of the pupils.

Register, schedule, and plans were checked. The teacher was given demonstrations in the teaching of Reading in Grades Two and Three.

The school was visited September 2, 3, 4, 16, 28 and October 13."

### THE SLATER FUND

Through the help of the Slater Fund county school officials are being induced to provide more and better high school opportunities for Negroes. During the biennium 1934-36 the Slater Fund contributed aid to Florida Negro Schools as follows:

1934-35			
COUNTY	SCHOOL	PURPOSE	AMOUNT
Gadsden	Stevens High School	6-room addition	\$2,000.00
Jackson	County Training School	Science equipment	100.00
Madison	County Training School	Science equipment	100.00
Manatee	Lincoln Academy	Science equipment	100.00
Nassau	Peck High School	Supplement salary of principal	100.00
Osceola	County Training School	Maps and furniture	100.00
Polk	Union Academy	Library and equipment	100.00
Suwannee	Douglas Junior High School	Toilet facilities	450.00
Taylor	County Training School	Blackboards	150.00
Walton	Tivoli High School	2-room addition	500.00
TOTAL			\$3,690.00
1935-36			
COUNTY	SCHOOL	PURPOSE	AMOUNT
Broward	Dillard High School	Supplementary Readers	\$ 100.00
Gadsden	Stevens High School	Home Economics	30.00
Jackson	County Training School	Home Economics	100.00
Levy	Williston	Desks	100.00
Madison	County Training School	Supplementary Readers	100.00
Marion	Howard Academy	Home Economics	100.00
Nassau	Peck High School	Supplementary Readers	100.00
Osceola	County Training School	Supplementary Readers	100.00
Polk	Union Academy	Supplementary Readers	100.00
Suwannee	Douglas High School	Supplementary Readers	100.00
Taylor	County Training School	Not used	100.00
Walton	Tivoli High School	Improved Building	100.00
To Jeanes Teachers' Salaries			2,970.00
TOTAL			\$4,100.00

### **PUPIL PROGRESS AND ACHIEVEMENT**

Very few county superintendents pay attention to pupil progress and achievement in their white schools; consequently, they pay no attention to pupil progress and achievement in their Negro schools. It is recommended that superintendents keep an accurate account of pupil progress and achievement in all schools as is kept of financial records.

### **THE ROSENWALD FUND**

The Rosenwald Fund discontinued granting aid on schoolhouse construction in 1931. During the depth of the depression the Fund was not very active. With the return of better business conditions the Fund renewed the granting of aid on the purchase of libraries for Negro Schools. The Fund now helps in the purchase of libraries. For the school year 1936-37, the Fund will have available four library sets, as follows:

1. An elementary library costing \$36.00, essentially the same as the one for 1935-36.
2. A supplementary elementary set costing \$15.00. This set will include no books listed in the \$36.00 elementary library.
3. The Negroana set (Books By and About Negroes) for High Schools, the same as the 1935-36 set.
4. A set of books about Interesting People all over the World for high schools, costing \$15.00. This set is to include books about Mexicans, Filipinos, Chinese, Japanese, Polynesians and Negroes.

The Fund will pay one-third the cost and freight charges on any of these sets for Negro schools, and one-third the cost plus freight on the two high school sets—Books By and About Negroes, and Interesting People All

over the World—for white high schools. The \$36.00 elementary set and the \$15.00 supplementary elementary set may be purchased by white schools at full cost plus freight charges.

The two extra library sets—one elementary and one high school—are being added this year at the urgent request of several of the State Departments of Education. The lists are being prepared by the officers of the Fund assisted by able library consultants. These will be ready for shipment within a short time.

## **CURRICULUM**

### **High School**

The high school curriculum is too traditional and does not fit the needs of Negro students. It is recommended that the curriculum be adapted to the needs of Negro students. The adaptation will increase the cost of secondary education but will provide the students with useful training and the state with better citizens.

### **Colleges**

The college curriculum is also too traditional. The subject matter taught in colleges needs to be integrated. It is recommended that the Negro colleges follow the pattern set by the University of Florida and teach general courses of integrated knowledge.

## CHAPTER V.

---

### TRADE AND INDUSTRIAL EDUCATION

During the biennium 1934-36 the program of trade and industrial training has made substantial progress. More persons have participated as noted from a comparison of the annual enrollment of 4,812 for the year ending June 30, 1934, the last year of the preceding biennium, and the enrollment of 10,195 for the corresponding year and date of the biennium for which this report is submitted.

In 1934 The State Board for Vocational Education cooperated with 12 counties in the operation of 13 local programs as compared with 18 counties and 22 local programs in 1936.

Enrollments and geographical spread indicate a wider acceptance of this type of educational service, but more significant evidence is present in the sincerity of purpose of those applying for training and the increasing readiness of employers to cooperate by accepting persons vocationally trained for employment.

The interest and business-like manner of the directive and instructional forces engaged in the service has been largely responsible for the advance in these respects. These characteristics are further reflected in the progress made in adapting the instruction to the actual needs of the worker.

The trends of the program have been in the direction of preparatory training on a short unit basis for those seeking first employment, and adjustment training for those, who through force of circumstances and conditions attending a general slump in production and business,

have lost their jobs to find that new skills and knowledge are required for the new jobs in prospect.

While training has been offered in more than thirty trades and occupations, the greater numbers have been trained in the service trades such as hotel work, barber service, and the commercial occupations. Entry into the building and other skilled trades has been low and consequently comparatively little has been done to train persons for these trades.

The organization of the classes has followed the regular lines in the main, i.e., day, part-time, and evening; however, one phase of part-time instruction has received added attention. This phase of the part-time plan relates to training for high school students in the junior and senior years. The primary objective has been to assist qualified students, who obviously will enter trades and occupations which do not require college training, in the selection of, entry into, and training for a definite occupation. The plan is operated on a cooperative basis between the school and employment, one-half time in school and the other in employment. The half time in school is devoted to technical and related skills pertinent to the occupation, and the work time is organized for definite training in actual job performance. The plan operates in the smaller centers and the larger ones alike, depending upon the cooperation of trade and business interests and the school. Experiments thus far have revealed a highly acceptable transition from full-time school to full-time employment without interrupting high school graduation or displacing older workers while students are in training.

Another important plan of part-time training has continued and has resulted in a high percentage of employment, viz: that of the hotel service. During 1934 eleven-hundred and ninety-four were trained in six centers. In

1936 fifteen-hundred sixty-four were trained in eight centers. The enrollments stated can be translated largely into citizens who have gained definite and remunerative employment in one of Florida's largest industries.

An experiment in a county-wide program operated from a central office in the county was begun during the biennium. Polk County, having a population of 82,184 and nine towns and cities ranging from a population of 1,632 to 21,017, agreed to cooperate in the plan. In the first year classes of a type suited to the needs of young and older workers were promoted. The total number of persons enrolled for training was 828.

In summary, Florida's program of trade and industrial training has met the problem of necessary job training for many of its most substantial citizens. No attempt has been made to describe progress along all lines in detail. However further information as to enrollment, expenditures, et cetera, may be secured from the following tables.

## CHAPTER VI.

---

### AGRICULTURAL EDUCATION

During the biennium ending June 30, 1936 the Vocational Agricultural Education program in Florida has compared favorably with that in the twelve southern States, as indicated by the fact that one of our teachers, Mr. M. B. Jordan, of Chiefland, Florida, was chosen Master Teacher of the South in 1935 and another teacher, Mr. A. W. Tenney of DeLand, Florida, was awarded fourth place in the Southern Regional Master Teacher Contest for 1936. These announcements were made by the Federal Agent for Agricultural Education in the Southern Region at the time of the Regional Conferences. After being selected All-Southern Master Teacher, Mr. Jordan was signally honored by the U. S. Office of Education on May 15, 1935. At that time he participated in a radio interview on a coast-to-coast hook-up sponsored by the U. S. Office of Education and broadcast over NBC from Washington, D. C. One feature of the program was the presentation of the All-Southern Master Teacher Diploma by Dr. J. C. Wright, who is in charge of Vocational Education in the U. S. Office of Education. This diploma is printed in gold letters on unborn lamb-skin, its intrinsic value being approximately sixty dollars.

The fact that teachers of Vocational Agriculture in Florida are professionally minded is apparent by their one hundred per cent membership in the following associations: Florida Vocational Agricultural Teacher's Association, Florida Vocational Association, American Vocational Association, and the Florida Education Association. Also, they lead the nation in the percentage

of subscribers to the AGRICULTURAL EDUCATION MAGAZINE, the only national professional magazine for Agricultural teachers.

During the past fiscal year the State Supervisor has served as a member of the State Advisory Committee of the National Youth Administration. In connection with the National Youth Administration we sponsored a school beautification and improvement program through part-time Vocational Agriculture classes. The teachers of Vocational Agriculture in the State received approximately \$3000 worth of materials through the National Youth Administration for their school properties to assist them in putting on their respective school beautification programs. This has been a most worth while project and the appearance of the school properties in the schools where we have departments of Vocational Agriculture has shown material improvement.

While the Agricultural Adjustment Act was in force, the teachers of Vocational Agriculture cooperated in every way possible in connection with the carrying out of the provisions of this Act and since this Act has been declared unconstitutional by the Supreme Court they have given full cooperation to the Agricultural Adjustment Administration in connection with carrying out the provisions of the Soil Conservation and Domestic Allotment Act. The State Supervisor, at the request of Hon. H. A. Wallace, Secretary of Agriculture, attended a Regional meeting at Memphis on March 5, 6, and 7, 1936 to confer with representatives of the U. S. Department of Agriculture on the program under the new Soil Conservation and Domestic Allotment Act.

We have had representatives of the Agricultural Adjustment Administration on our State Conference programs for Agriculture teachers to discuss the Agricul-

tural Conservation program and educational material relating to same.

During this biennium Florida, along with the other southern States, suffered an irreparable loss through the deaths of our two Federal Agents, namely, Mr. Robert D. Maltby, Agent for white schools, and Dr. H. O. Sargent, Agent for negro schools. These two men are due the major portion of the credit for the progress made in Agricultural Education in the south during the past decade. They were true leaders in their respective fields.

The teacher-training work for white Vocational Agriculture teachers is carried on at the University of Florida under Dr. E. W. Garriss as teacher-trainer. During the past fiscal year the addition of one man to the personnel of the teacher-training department became effective when the position of Itinerant Teacher-Trainer was added with the employment of a full-time person. For negroes the teacher-training work is carried on at the Florida A. & M. College, Tallahassee, with R. L. Reynolds as teacher-trainer.

In both these teacher-training institutions the seniors (trainees) do their practice teaching in regularly established high school departments under a regular teacher of Vocational Agriculture.

Each person taking instruction in Vocational Agriculture carried out on his home farm a supervised practice, or project, program under the supervision of his teacher. Accurate and up-to-date records were kept by each pupil. For the fiscal year 1934-35 the labor income from the supervised practice programs exceeded the cost of instruction by \$99,011.77. For every dollar invested in teachers' salaries from Federal, State, and county funds during the fiscal year 1934-35, the returns shown by the pupils' labor income from supervised practice programs was \$1.82.\*

The above data bear out the statement that Vocational

---

\*Figures for 1935-36 not yet available.

Agricultural Education in the State of Florida is worth what it costs.

The Florida Association, Future Farmers of America, has made commendable progress during the biennium showing a total increase in membership of approximately 54 per cent. The increase during the past fiscal year was from 1352 to 1916, a total gain of 546 members.

Each year during the biennium we have held a State Convention of the Florida Association, F. F. A. This Convention has been held at the University of Florida in Gainesville and the attendance has increased each year, indicating that the boys are interested in both the educational and recreational features of the State Convention. The Eighth Annual State Convention, which was held June 16, 17, and 18, 1936, was the most successful that we have held to date. We were honored by having Mr. J. A. Linke, Chief, Agricultural Education Service, U. S. Office of Education, who is the National Adviser, F. F. A., present during the entire State Convention. There were approximately seven hundred Future Farmers present, with every chapter in the State represented. The highlights of the State Convention were the F. F. A. Public Speaking Contest on Thursday afternoon and the banquet which was held in the University Cafeteria on Thursday night, June 18, as the closing feature of the State Convention. At this banquet we were honored by having a talk on Future Farmer work given by the National Adviser, Mr. J. A. Linke, and further honored by having the President of the University of Florida, Dr. John J. Tigert, as our principal speaker. The speeches in the Public Speaking Contest as well as Mr. Linke's and Dr. Tigert's addresses were broadcast over radio station WRUF.

We have been successful in securing a State Future Farmer Camp. The new F. F. A. Camp is located at

O'Leno on the Santa Fe River, just two miles off the main highway between Lake City and Gainesville. This is a beautiful camp site with a large combination recreation and dining hall, fourteen cabins for boys, three leaders' cabins, and a hospital cabin. We have electric lights and water furnished by the local power plant. The use of this camp has been donated by the Florida Forest Service to the Future Farmers as the official F. F. A. Camp.

During the past fiscal year we have inaugurated a regular F. F. A. radio broadcast over State-owned radio station WRUF, Gainesville. These monthly radio broadcasts are given on the third Saturday of each month from 5:30 to 6:00 p. m. In addition to the regular State F. F. A. radio program, the majority of the individual chapters in the State have broadcast programs over local radio stations.

During the biennium Florida has continued to receive national recognition in the F. F. A. Jacques Waller of Plant City, Past-President of the Florida Association, F. F. A., was elected National Student Secretary for the fiscal year 1934-35. Bonner Carter of Sanford won the honor of being selected the best F. F. A. judge of dairy cattle in the United States for 1934. Boyd Coleman of Sanford was successful in winning second place in the National Essay Contest sponsored by the American Royal Live Stock Show in 1934. In 1935 Oscar Watson of Jay, Florida was ranked as high individual judge of hogs at the National Contest in Kansas City. Lester Poucher, President of the Florida Association, F. F. A., and one of the delegates to the National Convention in Kansas City in 1935, won second place in the National Essay Contest sponsored by the American Royal Live Stock Show.

On February 8, 1936 we staged our first Future Farmer Day at the Florida State Fair in Tampa. The purpose of this occasion was to combine education and recreation.

In connection with the activities we had a judging contest in the morning and in the afternoon a brief meeting of the Future Farmers in front of the grandstand, after which they were all given passes for the afternoon's entertainment at the fair. During the meeting the boys were greeted by such persons as the State Superintendent of Public Instruction, the State Commissioner of Agriculture, the President of the Fair Association, and others. There were approximately a thousand members present at the fair on Future Farmer Day and each wore his Future Farmer cap. When these Future Farmers were lined up in front of the grandstand they made an impressive sight and did a great deal to convince the spectators at the fair that the Future Farmer Organization is making itself felt in the field of young people's organizations in the State of Florida.

We, in Agricultural Education in the State of Florida, are proud of the fact that due to the excellent programs of work carried out by the individual teachers, no County School Board, for more than three years, has seen fit to discontinue a department of Vocational Agriculture. In other words, the teachers of Vocational Agriculture in Florida are doing an excellent job and, therefore, the citizens and patrons of the schools in their respective communities see the value of a Vocational Agriculture program and are anxious to have it continued. As a result of this type of work carried on by the teachers throughout the United States, the National Congress, in June of this year, saw fit to make an additional appropriation for Vocational Education, effective July 1, 1937. This additional appropriation is of such scope that when matched by State funds it will enable us to meet the needs for Agricultural Education in the numerous high schools in agricultural communities in Florida that do not now have the services of a teacher of Vocational Agriculture.

## CHAPTER VII.

---

### HOME ECONOMICS EDUCATION

During this biennium the number of vocational day school programs has increased from 28 to 42 schools. The program in negro schools has increased from 16 to 20.

Home Economics programs not subsidized by vocational funds, that is programs not meeting requirements and standards for vocational home economics but meeting requirements for a high school unit of credit for graduation, have increased in about the same proportion.

Each year there are more applications for vocational home economics programs than can be approved within funds available. The day school program has been limited to one white and one negro program to a county until funds are sufficient to extend the program to every county. Each year several counties have requested additional vocational programs. This request can be met beginning with the fiscal year 1937, when additional and continuing funds will be made available by the passage of the George-Deen Act for Vocational Education during the last session of Congress in response to the increased need for vocational education over the country.

There has been a shortage of qualified home economics teachers both white and negro both years of the biennium. There is an increasing number of teachers each year who apply for vocational home economics certification and meet vocational requirements by further study through correspondence courses and summer school.

Each year teachers with successful experience and showing leadership are selected for other fields of home economics, as home demonstration, rural rehabilitation, rural resettlement, and commercial fields.

Itinerant teacher-training has been carried on through all-day Saturday conferences which have been held in every section of the State. In 1934-35 there were five of these conferences held with an attendance of 105 white teachers. In 1935-36 there were ten conferences held in various sections of the State with an attendance of 122 white teachers. The Associate Professor of Home Economics Education, Florida State College for Women, and the Instructor of Home Economics Education at P. K. Yonge Laboratory School, University of Florida, have assisted the State Supervisor of Home Economics Education in these conferences.

The topic for discussion at the conferences held in 1934-35 was the "Plan and The Interpretation of The New State Course of Study for Home Economics". Teaching learning situations in the various phases of home economics and source and illustrative materials in the teaching of these phases were discussed.

In 1935-36 the topic for discussion at the conferences was "Testing and Evaluating Home Economics Teaching and Pupil Growth In The Area of Earning, Spending, and Saving One's Resources". This is one of the major units in the required course in home economics, and it is the "core unit" so to speak. The plan is to carry on the program of study in testing and evaluating home economics teaching in all phases of home economics by spending some time in discussion of testing and measuring outcomes in all the various areas or units set up in the required course, "The Home and The Family". The other units or areas are provision for: housing, furnishings and equipment; food; health and safety; educational development; and clothing for all members of the family.

A State Conference for home economics teachers has been held each year in June for both the white and the negro teachers. The conference for the white teachers

was held at Florida State College for Women for one week. The theme of the conference in June 1936 was "Provision for Housing the Family: Social and Economic Aspects which Influence Various Factors of Family Life". Sixty-five teachers attended the conference.

The conference for the negro teachers was held at the Florida Agricultural and Mechanical College for Negroes with an enrollment of 35. The major topics for discussion at this conference was: "The Persistent Problems Which Young People Have in Home and Family Living Which Teachers Need to Understand For Effective Guidance of Youth In The Various Phases of Home Economics, and the Educational Diagnosis Important For Home Economics Teachers to Make in Guiding Growth and Development of Young People in Meeting Their Persistent Problems".

The home project program has developed a great deal in the past two years. Of the 35 white schools reporting home project programs during this past year there were 4,343 projects carried on by 1,385 girls. The number of girls carrying projects practically represents the number of home reached through home practice and home project work. These projects were carried on in the following phases of home economics:

- Earning, Spending and Saving One's Resources
- Housing, Furnishings and Equipment
- Foods and Nutrition
- Health and Safety
- Family and Social Relationships
- Child Development
- Clothing
- Laundering
- Gardening

Of the 19 negro schools reporting home project programs during the past year there were 1,134 projects carried on by 682 girls. The project were carried on in the same phases of home economics as listed above.

The following figures show the number of counties which have no vocational programs and the number of counties which have some type of vocational home economics programs:

Number of counties having day school vocational programs .....	45
Number of counties having some type vocational programs .....	46
(One county has an evening school program but no day school program)	
Number of counties having non-vocational or general-home economics (offered for a high school unit of credit) .....	13
Number of counties having no home economics programs .....	8

The evening school program has developed in scope and quality in some centers in the State where the program has been in progress.

The part-time vocational program has developed a great deal this past biennium in two centers, St. Petersburg and Jacksonville. The total enrollment in part-time schools has increased from 166 to 278.

Since the recent course of study has been in use, the program in the State is more unified.

Increased teacher-training to teachers in-service given through State, District, and Local conferences and meetings has helped to unify and strengthen the home economics programs and to stimulate teachers to increased professional study.

### **TEACHER TRAINING**

#### **Florida State College for Women**

The Florida State College for Women is the approved teacher-training institution for home economics.

The enrollment in the School of Home Economics and in the Major for Home Economics Education has continued to increase during the current biennium. In spite of the fact that each year shows an increase in the number of students preparing to teach in the schools of the State,

the State's demand for teachers of home economics for its high schools is still greater than the supply.

During her junior year, as a part of the course in methods of teaching home economics, each prospective teacher observes thirty sixty-minute lessons in home economics and related subjects in The Leon County High School or in The Florida High School, the training center for prospective teachers maintained by the Florida State College for Women. In her senior year, during the semester in which she is registered for supervised teaching, the student observes thirty-six sixty-minute lessons, has full charge of a high school class for six consecutive weeks and participates in teaching a minimum of ten additional lessons.

An increased demand for additional work in home economics in the Florida Elementary and High School has made imperative the employment, by the College, of a second critic teacher in home economics. As a result of this increase the program of home economics work at The Florida Elementary and High School now includes home economics for girls in the fourth, fifth, sixth, seventh, and eighth grades. The required year of home economics is open to boys and girls in the ninth or tenth grades and the elective units are open to both boys and girls in the tenth, eleventh, and twelfth grades.

The establishment of a Works Progress Administration nursery school on the campus of the Florida State College for Women under the joint supervision of the School of Home Economics, the School of Education, and the Departments of Psychology and Sociology has made possible weekly observation of young children by the teacher-training students, as a part of their course in child development in home economics.

Further experience in homemaking activities is provided in the Home Management House under the supervision of the resident faculty director. Senior students live in family-sized groups and carry on the work of a household.

The teacher-training institution offers assistance to the teacher in-service through its summer session courses, through special summer conferences sponsored jointly by the State Department of Public Instruction and the Florida State College for Women, and through the work of the Associate Professor of Home Economics Education in her visits to teachers in the field, correspondence with them, and individual conferences held with those coming to her office for special assistance.

Half of the salary of the Associate Professor of Home Economics Education and some of the expenses for travel are paid from State and Federal vocational funds. She does some itinerant teacher-training in the interest of following up the girls' ability on the job and acquaints herself with conditions in the field.

### **TEACHER TRAINING**

#### **Florida Agricultural and Mechanical College**

The Florida Agricultural and Mechanical College for Negroes is approved for teacher-training in home economics for negroes.

By agreement in 1932 the two-year normal curriculum in home economics was abandoned. It was doubtful in the minds of some that students would continue to enroll for home economics because of the popular two-year curriculum in the Division of Education and Teacher-Training. This doubt has been banished since that time. The number of persons training in vocational home economics education has been greater in the past two years than in the history of the institution.

The courses have been planned to meet the needs of the students as nearly as possible for those in training at the college and those in-service who have attended summer school.

More emphasis has been placed on discovering the needs of the community in which one lives and works, and providing more vocational experiences outside the classroom by using home project procedures in the training of home economics teachers. More attention has

been brought to bear on the possibility of the home economics teacher in the adult education program. Students have had some opportunity in observing and assisting adult programs especially in a household worker's training school made possible by the Works Progress Administration held at the college in the spring of 1936.

Three new courses have been added within the two-year period. Senior students have been given more responsibilities in the matter of observing student teachers in home economics classes in the demonstration junior and senior high schools. The use of the new State Course of Study has been stressed and has been followed as nearly as possible in the high school classes. This helps students to know how to assume their full share of responsibility in the public schools of the State.

The addition of some needed equipment in the home economics building and in the practice house has helped in the training of students.

In making this report the weaknesses of the teacher-training program are not to be overlooked, and it is hoped that they may be greatly improved. It is, therefore, recommended that some provision will be made whereby students in training may be transported to nearby rural and public schools and communities for observation. That a study of the graduates may be made with the view of improving the offerings at the college; that more selective processes may be used in determining prospective trainees; that as more opportunities shall become available for placing trained home economics teachers, more pressure shall be brought to bear upon teaching that for which they must be qualified.

The same statement made relative to the payment of the salary of the Associate Professor of Home Economics Education in Florida State College for Women and to itinerant teacher-trainers holds for the corresponding department in the Florida Agricultural and Mechanical College for Negroes.

## CHAPTER VIII.

### CIVILIAN VOCATIONAL REHABILITATION

Vocational rehabilitation is vocational guidance, training and placement service conducted exclusively for physically handicapped persons.

Any person above sixteen years of age who is physically disabled to the extent that his handicap interferes seriously with his ability to earn a living is eligible for service. From this group the Rehabilitation Department selects only those persons who appear able to become employable as a result of special vocational services.

During the last biennium the rehabilitation service has been extended to a larger group and has shown greatly increased results. The annual report to the Federal Government for the year ended June 30, 1935 showed a live roll of four hundred and eighty-five handicapped persons, one hundred and thirty-five of whom were in training; fifty-two were awaiting employment after training. During that year one hundred and one persons were rehabilitated—an increase of a hundred per cent over the preceding year. At the end of the second year of the biennium the live roll was composed of five hundred and six persons who were receiving some kind of rehabilitation services; one hundred and eighty-five were undergoing training and thirty-seven who had completed training were awaiting employment. During this year one hundred and fourteen physically handicapped persons were rehabilitated and ninety-nine others were engaged in employment under the supervision of the Department.

The last Florida Legislature increased its appropriation for rehabilitation from \$7500.00 to \$12006.16. The Federal Congress incorporated rehabilitation in its Social

Security Act and increased Florida's allotment from \$12006.16 to \$22043.31. Thus both State and Federal governments have recognized this as an expanding service necessary for the welfare of physically disabled persons and of society.

While the Federal Government took the initial step in rehabilitation and the states were quick to accept the provisions of the National Act, the local governments have begun to establish their own services. In fact Florida is the pioneer state in developing county rehabilitation services for the handicapped. We believe this to be sound policy from the standpoint of both economy and efficiency.

**The financial report for the biennium follows:**

**Expenditures for the fiscal year July 1,  
1934 to June 30, 1935**

**A. State Funds requisitioned for State Department expenditures:**

1. Administrative .....	\$ 5,560.94
a. Salary of Supervisor .....	\$3,240.00
b. Salary of Clerical Assistant .....	1,015.00
c. Travel of Supervisor .....	1,260.65
d. Communication .....	10.99
e. Printing .....	16.50
f. Supplies—Administrative .....	17.80
2. Case Production and Service .....	13,577.01
a. Tuition, Educational Institutions .....	\$5,200.00
b. Tuition, Commercial and Industrial Establishments .....	2,112.35
c. Tuition, Correspondence .....	187.70
d. Tuition, Tutorial .....	1,336.62
e. Instructional Supplies & Equipment .....	2,525.67
f. Travel of Trainees .....	460.50
g. Artificial Appliances .....	1,719.17
h. Physical examinations .....	35.00

**B. State Funds requisitioned to reimburse county expenditures:**

1. Salary and travel of county rehabilitation agents .....	\$ 383.21
--	-----------

C. County funds not reimbursed by the State Department but matched by Federal Expenditures .....	\$ 1,700.00
--	-------------

D. Funds contributed by private individuals .....	\$ 1,332.10
---	-------------

- E. The department received credit for the following sum expended by the University of Florida from its own appropriation on the training of physically handicapped students which amount was matched by a like sum of Federal Funds..... \$ 1,459.06
- Total Funds expended on Rehabilitation ..... \$24,012.32

**Expenditures for the fiscal year July 1  
1935 to June 30, 1936**

- A. State Funds requisitioned for State Department expenditures:
1. Administrative ..... \$ 5,690.23
    - a. Salary of Supervisor ..... \$3,240.00
    - b. Salary of Clerical Assistant .... 1,110.00
    - c. Travel of Supervisor ..... 964.40
    - d. Communication ..... 134.13
    - e. Printing ..... 103.30
    - f. Supplies ..... 138.40
  2. Case Production and Service ..... \$14,778.59
    - a. Tuition, Educational Institutions \$5,315.20
    - b. Tuition, Commercial and Industrial Establishments ..... 2,050.00
    - c. Tuition, Correspondence ..... 361.95
    - d. Tuition, Tutorial ..... 764.33
    - e. Instructional Supplies ..... 3,596.29
    - f. Travel of Trainees ..... 631.41
    - g. Artificial Appliances ..... 1,981.77
    - h. Physical Examinations ..... 78.00
- B. State Funds requisitioned to reimburse counties for Rehabilitation Expenditures ..... \$ 5,005.77
- C. Funds contributed by private individuals ..... \$ 856.36
- D. Funds contributed by the City of Miami ..... \$ 1,478.85
- E. County funds not reimbursed by State Department but matched by Federal expenditures ..... \$ 3,337.01
- Total Funds expended for Rehabilitation ..... \$31,146.81

The value of the rehabilitation program can best be illustrated by referring to individual cases like this:

H. L. left school at the age of fifteen just at the beginning of high school. He worked at various unskilled jobs until at the age of twenty-four when he was suddenly made unemployable by an automobile accident

which broke his back and left his legs paralyzed. Medical treatment and surgery preserved his life but could not restore function to his legs. His need for money and the necessities of life were not diminished but increased by his misfortune. His earning capacity was gone. Ordinarily this kind of problem has not disturbed the minds of educators, but here was a very good opportunity to try out some of our theories about individual differences and to fit education to the needs of the student. Neither the school room nor the certificated teachers met his needs for training to restore his earning power. The family living room was substituted for the class room, and a jeweler became a teacher. Later special transportation was arranged and the training place transferred to a jewelry store. The customers did not know they were visiting a State educational institution. The final results of the program arranged for this young man are gratifying—an idle, discouraged man who appeared to be an invalid has been changed into an enthusiastic tradesman; his earning power is restored. Rehabilitation means more than a big word to him.

Our estimate of the earnings of the total group rehabilitated is \$250,000.00 annually which is more than ten times the annual average cost.

Persons rehabilitated by this division suffered from many kinds of disabilities including the loss of a limb, loss of both limbs, loss of an arm, blindness, deafness, weak heart, infantile paralysis, etc.

As long as diseases and accidents continue to handicap our citizens we will have a rehabilitation problem. We must expand our service to give all who need it a fair chance. Some provisions must be made to meet the needs of handicapped children and adults so that our educational system will help them adjust themselves to life as they find it. But we must do all we can to promote safety and health and thus reduce the number needing rehabilitation service.

## CHAPTER IX.

---

### SCHOOL BUILDINGS

During the past biennium the School Building Division has been called upon to render many different services.

Two hundred and twenty three (223) different communities have been furnished with building plans ranging in size from one through four classrooms. Most of the plans furnished required from three to six sets, which means that the division has actually been called upon for about one thousand sets of blue prints.

Unfortunately, some of the buildings erected from these plans are poorly suited to the needs of the community in which they were erected because no one had the responsibility of studying their needs, financial ability nor of setting up their program of studies before launching the building program. In many cases school trustees have failed to realize the necessity for careful planning, or they have wilfully gone ahead with programs unsuited to their needs in order to keep up with, or outstrip, a neighboring district. Illustrating this point,—recently a request was received from a federal agency for an eight-room schoolhouse plan for an approved project for a district school. The agency was advised that plans and specifications could not be furnished by the department for a project of this size, but the school district would be assisted in every way possible. It was found that this district was competing with a neighboring district and that it did not need the requested plant. The district already had a good brick plant of six rooms and auditorium; also a small wooden plant which has been poorly maintained. According to their own figures they had an enrollment of one hundred and fifty-eight (158) pupils

and an average daily attendance of ninety-six during the 1935-36 term. They were operating a twelve grade school and had nine full time teachers. Within the bounds of the same county there are numerous undermanned, totally inadequate school plants and programs. It ill behooves us to talk about equality of educational opportunities unless we remedy many similar sore spots in the administration of our school affairs.

Waste is one thing that school people can ill afford. In order to assist districts to conserve their resources they should be required to have their programs approved by the State Department of Public Instruction before they are launched. This will cause the district and county authorities to think through and survey their proposed changes more adequately.

Fifty-eight different floor plans were prepared for plants larger than four class-rooms. In most instances the plans were to be used as guides for school officials to help get over to architects their conception of a plant suited to their needs. Some of the plans were used to help district bond issues by showing the voters a plan of what the proposed building would look like.

The preparation of sketches for alteration or additions to old plants is a very important phase of the service rendered by the division to the State. Some plants have been entirely abandoned when they could have been functionally and hygienically adapted to a district's need at a saving to the taxpayers. This particular service can not often be rendered satisfactorily by an architectural firm. Every proposed plant in this day of complex needs should be studied by an educational consultant as well as by an architect.

Recently, a building plan was referred to the division that was unusually poor. By eliminating unnecessary

classroom heights, etc., the plan was so re-arranged that the cubical contents were cut down one third. Of course, this was an extreme case but the plan had been approved by the district trustees and by a federal agency for erection as a school plant.

Nineteen plants were inspected as to their physical safety by this division. In nearly all cases the buildings were absolutely unsafe and in poor shape relative to sanitary conveniences, lighting and other modern desirable standards. That such buildings could remain in service until they were actually a menace to the health of the pupils is due to the scattering of school building responsibility, to the method of financing new plants and to the lack of emphasis upon modern standards for schools. It is no wonder that school attendance is very bad in some sections of the state.

The present method of financing must be improved, and new plants must be changed before there will ever be a semblance of equality in housing conditions over the state. Holmes County had only one hundred and eighty dollars and eighty-three cents (\$180.83) of assessed taxable valuation behind each enrolled child in 1936, while Collier County had two thousand five hundred and seventeen dollars and one cent (\$2,517.01), fourteen times as much as Holmes. The State should help to more nearly equalize school surroundings.

It looks very much like the Federal Government will continue its program of public works. The school districts of Florida have not been able to match the PWA funds because many districts had defaulted bonds or had already floated all the bonds they could legally issue. If the State school system could set up a building fund to be matched by local, county, and possibly federal funds, it would eliminate many bad housing conditions.

Last month Dr. W. W. Carpenter, professor of education at the University of Missouri, in an address to

the National Council on Schoolhouse Construction at Austin, Texas, said: "It is absolutely necessary that the federal governments and state governments take some material step toward equalizing educational housing of boys and girls. Minimum physical facilities must be required and if necessary financed by the states and federal government to the end that every child will have an opportunity to attend school in a safe, sanitary, attractive and suitable schoolhouse." Dr. Henry Lester Smith, ex-president of the National Education Association, at the same meeting, emphasizing the need for more adequate school building funds pointed out that the program of the public schools had been extended downward to include the kindergartens and the nursery school, upward to include the junior college and adult education, and outward to provide many educational opportunities made necessary by the rapid changes in modern civilization. These changes make it necessary to provide plant facilities far beyond the bare walls of the little red schoolhouse.

Last year the division assisted the State Planning Board in making a survey of the schoolhouse situation in the state. Many unusual conditions were brought to light.

During the 1934-35 school term school districts spent only three hundred fifty thousand ninety-nine dollars and eighty-four cents (\$350,099.84) for the maintenance of public school property valued at sixty-seven million three hundred thirty-nine thousand nine hundred and thirty-nine dollars and thirty-nine cents (\$67,339,939.39). Such a sum for maintenance of this investment is totally inadequate and is indicative of a "penny wise and pound foolish" policy.

The Educational Survey Commission in 1929 had this statement relative to Florida school maintenance pro-

gram: "There is no satisfactory program of maintenance or operation of school buildings in a large majority of the places throughout the state. Buildings, when once built, were allowed to deteriorate very rapidly. In many cases school buildings were quite unclean. This, however, should not be taken as characteristic of the entire state for in many places superintendents, school board members, and the teaching staff are stressing the importance of maintaining school buildings in a high degree of cleanliness." Today, there is not a satisfactory maintenance program.

Last year, schools were being operated in four hundred buildings (400) that were not owned by the school districts and poorly suited to usage as school buildings. There is, in fact, a shortage of one thousand five hundred and fifteen classrooms in the public school system, besides many other buildings which should be abandoned.

During the past biennium three hundred and eighty (380) inspections of school buildings under construction were made. Often trustees do not realize the absolute necessity of having some qualified person see that school plans and specifications are meticulously followed. Many contractors who are accustomed to building residences, and who seldom erect schoolhouses, think architects have made a mistake when they specify that windows shall be forty two inches above the floor and, in too many instances, they will change plans to suit their own idea unless they are supervised. Then too, like any other group, there are some contractors who are dishonest. Recently, a project was inspected where the contractor was pouring a concrete foundation mixture of one-half part cement to two parts ordinary sand and five parts poorly sized river bottom gravel. Because a community has seen fit to get a satisfactory building plan and a good set of specifications does not mean by any stretch of

one's imagination that they will necessarily get what the plans say that they should have.

This department assisted nineteen (19) communities to make rather hurried surveys of their present and future building needs. Too often, the building division has been called upon after the district has decided upon a program without any pretense at predicting the future of that community's growth or studying the shifting of their population or interests. Every district should take advantage of all the state educational department's services or of those of other capable agencies and make a thorough survey before setting up their educational, financial and building program.

The following are other services rendered: the studying of forty-nine sets of plans and specifications for architects who had been commissioned by boards to prepare plans for them. This division has participated in, or held conferences with various federal agencies on eighty-eight (88) different occasions concerning federal aid for proposed building projects. Sixteen different type plans have been drawn for school buildings having from one through four classrooms. Color schemes have been furnished for the interior and also exterior of school plants on twenty-five occasions. Plans have been provided for sixteen home economics departments, eight libraries, twenty agricultural rooms, dozens of home-made kindergarten tables, several hundred home-made pupils' desks, eleven gymnasiums, thirty-one sets of toilets including incinerator, flush, and pit toilets. Members of the staff have attended and participated in twenty-five educational meetings, thirty-eight schoolboard meetings; made ten recommendations relative to changing and improving heating plants; assisted in the selection of fifty-eight school building sites, and in the remodeling or addition of rooms to sixty-one old buildings.

## IT IS RECOMMENDED THAT:

1. The State Board of Education be given the authority to set up a code for school building construction, be given adequate authority to enforce it and have the responsibility of reviewing all plans for public school buildings which are to be erected in the state.

2. The State Board of Education be given authority to condemn public school plants that endanger the health or safety of children.

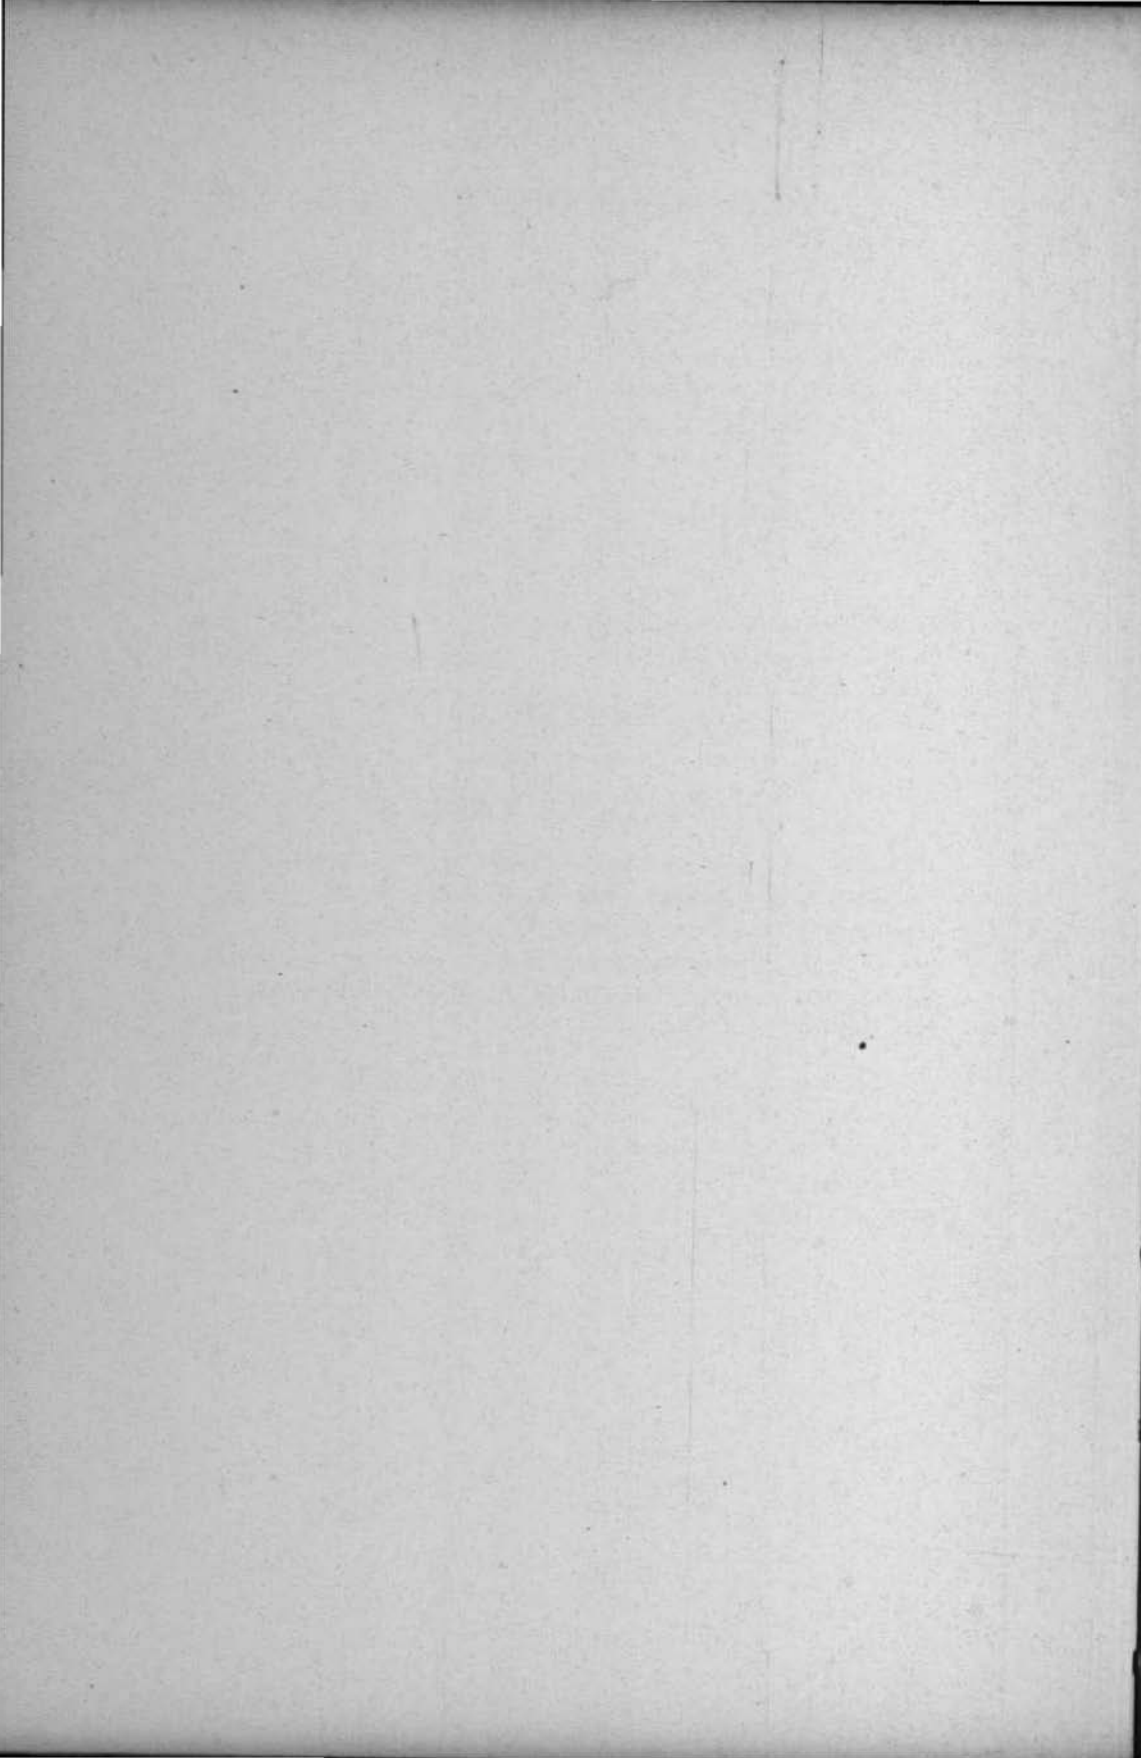

3. The State Legislature set up a Commission for insuring all State property against loss or damage which may be caused by fire, lightning or windstorm. Such a commission should be given authority to act as an insurance company, issuing a standard form policy and collecting necessary annual premiums. We cannot go into a discussion of the merits of such a law in this report but suffice it to say several states and many cities are carrying their own insurance at substantial savings to the State. The South Carolina Commission is operating so successfully that three-fourths of the property is insured free of charge and the commission has been operating since 1900.

4. The Legislature set up a fund for more nearly equalizing the educational housing facilities for its boys and girls. Every child required to attend school should be housed in a building that at least meets minimum standards relative to safety, sanitary conveniences, and suitability as a modern school plant.

## CHAPTER X

### STATISTICAL TABLES

Chapter X contains the Statistical Tables covering the two fiscal years ending June 30, 1935 and June 30, 1936, compiled from annual reports of county superintendents to the State Superintendent of Public Instruction. Summaries of the statistics for both years are given on pages 264 and 369.

## STATISTICAL TABLES

1934-1935

Tables:	Page
I. (a) Number of Schools; (b) Average Length of Term .....	272

(1) Paid for previous year.

(2) No negro pupils reported; this amount evidently paid for previous year.

(3) In addition to the cost of textbooks, \$1,904.89 was spent by the State Department of Public Instruction for printing and incidental expenses. The Comptroller's records show, in addition to this amount, \$17,027.63 paid for commissions to tax assessors and collectors, and \$2,686.15 for textbooks for the school year 1935-36, paid before the books for the fiscal year 1934-35 were closed.

(1) Amount paid for transportation for previous year.

(2) \$280,863.45 of this amount was paid from General Revenue.

In addition to the amount spent for textbooks, \$4,571.25 was spent by the State Department of Public Instruction for incidental expenses. In addition to the amount spent for textbooks and incidental expenses, the Comptroller's books show \$9,393.96 paid from the Textbook Fund for commissions to Tax Assessors and Collectors. \$2,636.15 of the above amount was paid before the books in the office of the Comptroller were closed for 1934-35 and are included in figures for that year.

(3) \$99.54 of this amount was paid for textbooks for the Girl's Industrial School. Ocala, not included in report of county superintendent
